## Speaking Of Children:

**Development of Pragmatic and Discourse Skills in Chinese-Speaking Children** Zhu Hua, Lixian Jin, 2014-05-15 For many years studies of the development of pragmatic and discourse skills in young children have predominantly focused on English and other European languages as with the field of child language development in general This volume originally published in Chinese Language and Discourse 3 1 2012 brings together a team of researchers from China the UK USA Hong Kong Macao and Taiwan It explores the development of pragmatic and discourse skills among Chinese speaking children by investigating the development of pragmatic features specific to the Chinese language and culture i e the use of null forms and overt forms in self other reference and time expressions socio cultural factors in child directed speech and comprehension of semiotic resources in children s early childhood The studies reported in the volume draw upon data of different kinds including recorded spontaneous speech corpus questionnaires and experimental data The findings not only highlight a number of developmental patterns which may be attributed to the Chinese language s and culture but also contribute to the understanding of some key issues in the development of pragmatic and discourse skills irrespective of linguistic backgrounds

**Language Development and Disorders in Spanish-speaking Children** Alejandra Auza Benavides, Richard G. Schwartz, 2017-06-13 Prominent researchers from the US Mexico Chile Colombia and Spain contribute experimental reports on language development of children who are acquiring Spanish The chapters cover a wide range of dimensions in acquisition comprehension and production monolingualism and bilingualism typical development children who are at risk and children with language disorders phonology semantics and morphosyntax These studies will inform linguistic theory development in clinical linguistics as well as offer insights on how language works in relation to cognitive functions that are associated with when children understand or use language The unique data from child language offer perspectives that cannot be drawn from adult language The first part is dedicated to the acquisition of Spanish as a first or second language by typically developing children the second part offers studies on children who are at risk of language delays and the third part focuses on children with specific language impairment disorders and syndromes

**Good References on Language Handicaps of Non-English-speaking Children**, 1938 Comprehension of verb inflection in German-speaking children Brandt-Kobe, Oda-Christina, 2014-10-09 Previous studies on the acquisition of verb inflection in normally developing children have revealed an astonishing pattern children use correctly inflected verbs in their own speech but fail to make use of verb inflections when comprehending sentences uttered by others Thus a three year old might well be able to say something like The cat sleeps on the bed but fails to understand that the same sentence when uttered by another person refers to only one sleeping cat but not more than one The previous studies that have examined children s comprehension of verb inflections have employed a variant of a picture selection task in which the child was asked to explicitly indicate via pointing what semantic meaning she had inferred from the test sentence Recent research on other

linguistic structures such as pronouns or focus particles has indicated that earlier comprehension abilities can be found when methods are used that do not require an explicit reaction like preferential looking tasks This dissertation aimed to examine whether children are truly not able to understand the connection between the verb form and the meaning of the sentence subject until the age of five years or whether earlier comprehension can be found when a different measure preferential looking is used Additionally children's processing of subject verb agreement violations was examined The three experiments of this thesis that examined children's comprehension of verb inflections revealed the following German speaking three to four year old children looked more to a picture showing one actor when hearing a sentence with a singular inflected verb but only when their eye gaze was tracked and they did not have to perform a picture selection task When they were asked to point to the matching picture they performed at chance level This pattern indicates asymmetries in children's language performance even within the receptive modality The fourth experiment examined sensitivity to subject verb agreement violations and did not reveal evidence for sensitivity toward agreement violations in three and four year old children but only found that children's looking patterns were influenced by the grammatical violations at the age of five The results from these experiments are discussed in relation to the existence of a production comprehension asymmetry in the use of verb inflections and children's underlying grammatical knowledge

**Phonological Encoding and Monitoring in Normal and Pathological Speech** Robert J. Hartsuiker,2005 This book reports recent research on mechanisms of normal formulation and control in speaking and in language disorders such as stuttering aphasia and verbal dyspraxia The theoretical claim is that such disorders result both from deficits in a component of the language production system and interactions between this component and the system that monitors for errors and undertakes a corrective behaviour In particular the book focuses on phonological encoding in speech the construction of a phonetic plan for utterances on verbal self monitoring checking for correctness and initiating corrective action if necessary and on interactions between these processes Bringing together sixteen original chapters by leading international researchers this volume represents a coherent statement of current thinking in this exciting field The aim is to show how psycholinguistic models of normal speech processing can be applied to the study of impaired speech production This book will prove invaluable to any researcher student or speech therapist looking to bridge the gap between the latest advances in theory and the implications of these advances for language and speech pathology
