Statistical And Neural Classifiers:

Statistical and Neural Classifiers Sarunas Raudys,2001-01-29 The classification of patterns is an important area of research which is central to all pattern recognition fields including speech image robotics and data analysis Neural networks have been used successfully in a number of these fields but so far their application has been based on a black box approach with no real understanding of how they work In this book Sarunas Raudys an internationally respected researcher in the area provides an excellent mathematical and applied introduction to how neural network classifiers work and how they should be used

Computer Analysis of Images and Patterns Wladyslaw Skarbek,2003-06-30 Computer analysis of images and patterns is a scientific field of longstanding tradition with roots in the early years of the computer era when electronic brains inspired scientists Moreover the design of vision machines is a part of humanity's dream of the artificial person I remember the 2nd CAIP held in Wismar in 1987 Lectures were read in German English and Russian and proceedings were also only partially written in English The conference took place under a different political system and proved that ideas are independent of political walls A few years later the Berlin Wall collapsed and Professors Sommer and Klette proposed a new formula for the CAIP let it be held in Central and Eastern Europe every second year There was a sense of solidarity with scientific communities in those countries that found themselves in a state of transition to a new economy A well implemented idea resulted in a chain of successful events in Dresden 1991 Budapest 1993 Prague 1995 Kiel 1997 and Ljubljana 1999 This year the conference was welcomed at Warsaw There are three invited lectures and about 90 contributions written by more than 200 authors from 27 countries Besides Poland 60 authors the largest representation comes from France 23 followed by England 16 Czech Republic 11 Spain 10 Germany 9 and Belarus 9 Regrettably in spite of free registration fees and free accommodation for authors from former Soviet Union countries we received only one accepted paper from Russia

Control Applications and Ergonomics in Agriculture 1998 N. Sigrimis,P.P. Groumos,1999 In this workshop an attempt was made to fuse the disciplines involved in the requirements specification design and implementation of control systems for the automation of agricultural systems The need to meet the demanding specifications for increasingly complex agricultural systems is being addressed by using increasingly sophisticated models and control algorithms In parallel the ever decreasing profit margins in the agricultural sector no longer permit agriculture to operate in the traditional manner but are forcing it to transform into a contemporary business with all the complexities that this implies The work environment is changing rapidly and humans are moving to positions of supervision and management while automation and robotics are taking over many of the menial and tedious tasks Modern technological developments in industrial management and control are entering agriculture and transforming it rapidly into an industry Smaller agricultural systems are being linked to produce hierarchical large scale agricultural systems whose management and control demands high level intelligent decision support mechanisms Local and wide area networks provide the relevant agricultural and economic data and facts to central production management systems where decisions are made and subsequently transferred to remote locations for execution Agriculture which is a highly distributed operation is taking advantage of modern communications networks unifying remote locations into a virtual world Agriculture has been making significant steps in producing food and fibers of improved quality in a highly constrained economic environment Robust control of such a largely uncertain system demands that application domain experts work closely with systems analysts and control engineers to produce systems of higher autonomy and efficiency to meet todays global challenge
