The Application of Neural Networks in the Earth System Sciences Vladimir M. Krasnopolsky, 2013-06-14

This book brings together a representative set of Earth System Science ESS applications of the neural network NN technique. It examines a progression of atmospheric and oceanic problems which from the mathematical point of view can be formulated as complex multidimensional and nonlinear mappings. It is shown that these problems can be solved utilizing a particular type of NN the multilayer perceptron MLP. This type of NN applications covers the majority of NN applications developed in ESSs such as meteorology oceanography atmospheric and oceanic satellite remote sensing numerical weather prediction and climate studies. The major properties of the mappings and MLP NNs are formulated and discussed. Also the book presents basic background for each introduced application and provides an extensive set of references. This is an excellent book to learn how to apply artificial neural network methods to earth system sciences. The author Dr Vladimir Krasnopolsky is a universally recognized master in this field. With his vast knowledge and experience he carefully guides the reader through a broad variety of problems found in the earth system sciences where neural network methods can be applied fruitfully. The broad range of topics covered in this book ensures that researchers graduate students from many fields will find it an invaluable guide to neural network methods.

Prof William W Hsieh University of British Columbia Vancouver Canada

Vladimir Krasnopolsky has been the founding father of applying computation intelligence methods to environmental science. Dr Krasnopolsky has created a masterful exposition of a young yet maturing field that promises to advance a deeper understanding of best modeling practices in environmental science.

Dr Sue Ellen Haupt National Center for Atmospheric Research Boulder USA

Vladimir Krasnopolsky has written an important and wonderful book on applications of neural networks to replace complex and expensive computational algorithms within Earth System Science models. He is uniquely qualified to write this book since he has been a true pioneer with regard to many of these applications. Many other examples of creative emulations will inspire not just readers interested in the Earth Sciences but any other modeling practitioner to address both theoretical and practical complex problems that may or will arise in a complex system.
