Hunter, 2005-05-31 A Classic adapted to modern times Rewritten and updated this new edition of Statistics for Experimenters adopts the same approaches as the landmark First Edition by teaching with examples readily understood graphics and the appropriate use of computers Catalyzing innovation problem solving and discovery the Second Edition provides experimenters with the scientific and statistical tools needed to maximize the knowledge gained from research data illustrating how these tools may best be utilized during all stages of the investigative process The authors practical approach starts with a problem that needs to be solved and then examines the appropriate statistical methods of design and analysis Providing even greater accessibility for its users the Second Edition is thoroughly revised and updated to reflect the changes in techniques and technologies since the publication of the classic First Edition Among the new topics included are Graphical Analysis of Variance Computer Analysis of Complex Designs Simplification by transformation Hands on experimentation using Response Surface Methods Further development of robust product and process design using split plot arrangements and minimization of error transmission Introduction to Process Control Forecasting and Time Series Illustrations demonstrating how multi response problems can be solved using the concepts of active and inert factor spaces and canonical spaces Bayesian approaches to model selection and sequential experimentation An appendix featuring Quaker universal quotes from a variety of sources including noted statisticians and scientists to famous philosophers is provided to illustrate key concepts and enliven the learning process All the computations in the Second Edition can be done utilizing the statistical language R Functions for displaying ANOVA and lambda plots Bayesian screening and model building are all included and R packages are available online All these topics can also be applied utilizing easy to use commercial software packages Complete with applications covering the physical engineering biological and social sciences Statistics for Experimenters is designed for individuals who must use statistical approaches to conduct an experiment but do not necessarily have formal training in statistics Experimenters need only a basic understanding of mathematics to master all the statistical methods presented This text is an essential reference for all researchers and is a highly recommended course book for undergraduate and graduate students

Statistics for Experimenters George E. P. Box, J. Stuart Hunter, William G. Hunter, 2005-05-31 Focuses on applications in the physical engineering biological and social sciences From the beginning the book's source of ideas is the scientific method itself and the need of the investigator to make his or her research as effective as possible through proper choice and conduct of experiments and appropriate analysis of data

Statistics for Experimenters George E. P. Box, William G. Hunter, J. Stuart Hunter, 1978-07-06 Introduces the philosophy of experimentation and the part that statistics plays in experimentation Emphasizes the need to develop a capability for statistical thinking by using examples drawn from actual case studies

Information Retrieval Evaluation in a Changing World Nicola Ferro, Carol Peters, 2019-08-13 This volume celebrates the twentieth anniversary of CLEF the Cross Language Evaluation Forum for the first ten years and the Conference and Labs of the Evaluation Forum since and traces its evolution over these first two decades CLEF's main mission is to promote research innovation and development of information retrieval IR systems by anticipating trends in information management in order to stimulate advances in the field of IR system experimentation and evaluation The book is divided into six parts Parts I and II provide background and context with the first part explaining what is meant by experimental evaluation and the underlying theory and describing how this has been interpreted in CLEF and in other internationally recognized evaluation initiatives Part II presents research architectures and infrastructures that have been

developed to manage experimental data and to provide evaluation services in CLEF and elsewhere Parts III IV and V represent the core of the book presenting some of the most significant evaluation activities in CLEF ranging from the early multilingual text processing exercises to the later more sophisticated experiments on multimodal collections in diverse genres and media In all cases the focus is not only on describing what has been achieved but above all on what has been learnt The final part examines the impact CLEF has had on the research world and discusses current and future challenges both academic and industrial including the relevance of IR benchmarking in industrial settings Mainly intended for researchers in academia and industry it also offers useful insights and tips for practitioners in industry working on the evaluation and performance issues of IR tools and graduate students specializing in information retrieval
