Variabelen

Variabelen: grootheden (aspecten van subjecten, processen of verschijnselen) die verschillende uitkomsten kunnen hebben voor verschillende subjecten of voor dezelfde subjecten op verschillende momenten in de tijd

- Univariate analyse: een enkele variabele (lengte)
- Bivariate analyse: twee variabelen (lengte, gewicht)
- Multivariate analyse: meer variabelen (lengte, gewicht, geslacht)

Meetniveaus

De term 'meetniveau' is een verwijzing naar de attribuut informatie (ordening, afstand, nulpunt), die aan de uitkomsten van variabelen verbonden is.

Verskillende meetniveaus van variabelen:

1. Kwalitatieve meetniveaus:

- Nominaal (geslacht, naam bedrijf land, etc.) naamgeving
- Ordinaal (functieniveau, preferentie, etc.) ordeningsinterpretatie

2. Kwantitatieve meetniveaus:

- Interval (temperatuur, beloningsverschil, etc.) afstandsinterpretatie
- Ratio (temperatuur Kelvin, lengte, salaris, etc.) er is een absoluut nulpunt aanwezig

Figuur 1: meetniveaus

Degenereren: variabelen behandelen als gemeten op lager meetniveau; vrijwel altijd mogelijk

Guide to Tables in Mathematical Statistics Joseph Arthur Greenwood, H. O. Hartley, 2017-03-14 This book is exclusively devoted to the tables of mathematical statistics. It catalogues a large selection of tables in the field of mathematical statistics with a small selection of mathematical tables lying outside statistics but often used with statistical tables. Originally published in 1962, The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Statistics for Engineers Hartmut Schiefer, Felix Schiefer, 2021-04-16 This book describes how statistical methods can be effectively applied in the work of an engineer in terms that can be readily understood. Application of these methods enables the effort involved in experiments to be reduced, the results of these experiments to be fully evaluated, and statistically sound statements to be made as a result. Products can be developed more efficiently and manufactured more cost effectively, not to mention with greater process reliability. The overarching aim is to save time, money, and materials. From the examples provided, the nature of the practical application can be clearly grasped in each case. This book is a translation of the original German 1st edition *Statistik für Ingenieure* by Hartmut Schiefer and Felix Schiefer, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature, in 2018. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. The present version has been revised technically and linguistically by the authors in collaboration with a professional translator. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Development in the Asia Pacific Jong S. Jun, 1994. Comprises 26 essays which examine significant policy issues in individual countries of the Asia Pacific region from the 1950s to 1992, with emphasis on the 1980s and 1990s. Includes discussions of policy making processes.

Sampling of Powders and Bulk Materials Karl Sommer, 2012-12-06. The present book is based on the experience of sampling powders and bulk materials at the Institute of Mechanische Verfahrenstechnik, Karlsruhe University, Germany. Sampling is understood to be the taking of samples from a material in order to obtain information about the composition of the total amount in respect of one or more attributes such as metal content, ash content, moisture, particle size, particle shape, etc. In the case of granular bulk material, already comminuted or not, samples from tubs, trucks, bags, or barrels. As granular material has a strong tendency to segregate, portions must be removed from these containers at many places. The book describes the basic theory behind sampling materials in powder or granular form. In addition to providing fundamental statistical data, it also highlights the mistakes that can arise in the different types of sampling techniques such as suspensions, pellet cross sections, sample dividing, or sampling according to number or weight. If

the samples contain individual particles comparable in size to the size of the sample itself then in addition to the number of individual elements in the sample and the type of sampling the particle size and particle size distribution will be further variables This book will pay special attention to this fact important for the whole of powder technology the chemical pharmaceutical food and and for mineral processing industry

Case Studies in Archaeological Predictive Modelling Philip Verhagen, 2007 Dutch archaeology has experienced profound changes in recent years This has led to an increasing use of archaeological predictive modelling a technique that uses information about the location of known early human settlements to predict where additional settlements may have been located Case Studies in Archaeological Predictive Modelling is the product of a decade of work by Philip Verhagen as a specialist in geographical information systems at RAAP Archeologisch Adviesbureau BV one of the leading organizations in the field the case studies presented here provide an overview of the field and point to potential future areas of research

2012, 2013-03-01 Particularly in the humanities and social sciences festschrifts are a popular forum for discussion The IJBF provides quick and easy general access to these important resources for scholars and students The festschrifts are located in state and regional libraries and their bibliographic details are recorded Since 1983 more than 659 000 articles from more than 30 500 festschrifts published between 1977 and 2011 have been catalogued
