The Planetary Boundary Layer CAS Working Group on Atmospheric Boundary-layer Problems, 1979 **An Introduction to Boundary Layer Meteorology** Roland B. Stull, 1988-07-31 Part of the excitement in boundary layer meteorology is the challenge associated with turbulent flow one of the unsolved problems in classical physics An additional attraction of the field is the rich diversity of topics and research methods that are collected under the umbrella term of boundary layer meteorology The flavor of the challenges and the excitement associated with the study of the atmospheric boundary layer are captured in this textbook Fundamental concepts and mathematics are presented prior to their use physical interpretations of the terms in equations are given sample data are shown examples are solved and exercises are included The work should also be considered as a major reference and as a review of the literature since it includes tables of parameterizations procedures field experiments useful constants and graphs of various phenomena under a variety of conditions It is assumed that the work will be used at the beginning graduate level for students with an undergraduate background in meteorology but the author envisions and has catered for a heterogeneity in the background and experience of his readers *Planetary Boundary Layer* World Meteorological Organization, World Meteorological Organization. Eidgenossische Technische Hochschule ETH Zurich Hoenggerberg in 1991 His reason for the suggestion was the growing
interest in the environment and its dynamics created by flow in the Atmospheric Boundary Layer I have been teaching
boundary layer to undergraduate and graduate students for more than twenty five years so I agreed to give a series of
lectures on boundary layer of the atmosphere From the start I thought very seriously about the problem and consulted all the
published works in English on the Atmospheric Boundary Layer ABL First consider the topography of the Earth which has
oceans calm and turbulent mountain ranges of height up to 9 km lands of variable height with forests food growing vegetable
and deserts The shape of the Earth is nearly spherical except at the north and south poles Sun supplies the energy to drive
circulation of air around the Earth s atmosphere which for all practical purposes occupies the region up to about 10 to 11 km
This brief scenerio of Earth s topography reveals the complexity of flow very close to the Earth s surface that is hardly flat
