Zheng, Larry L. Peterson, Bruce S. Davie, Adrian Farrel, 2009-08-04 *Wireless Networking Complete* is a compilation of critical content from key Morgan Kaufmann titles published in recent years on wireless networking and communications. Individual chapters are organized into one complete reference giving a 360 degree view from our bestselling authors. From wireless application protocols to Mesh Networks and Ad Hoc Sensor Networks to security and survivability of wireless systems, all of the elements of wireless networking are united in a single volume. The book covers both methods of analysis and problem solving techniques, enhancing the reader's grasp of the material and ability to implement practical solutions. This book is essential for anyone interested in new and developing aspects of wireless network technology. Chapters contributed by recognized experts in the field cover theory and practice of wireless network technology, allowing the reader to develop a new level of knowledge and technical expertise. Up to date coverage of wireless networking issues facilitates learning and lets the reader remain current and fully informed from multiple viewpoints. Presents methods of analysis and problem solving techniques, enhancing the reader's grasp of the material and ability to implement practical solutions. [E-Business and Distributed Systems Handbook](#) Amjad Umar, 2003-05 This module explains the growing number of Application Servers and their variants: Mobile Application Servers, Commerce Servers, B2B Servers, Multimedia and Collaboration Servers. This is one module of an extensive handbook that systematically discusses how to translate e business strategies to working solutions by using the latest distributed computing technologies. The focus of this module of the handbook is on application servers that package several middleware and infrastructure services into a platform for development, deployment and management of modern applications. Chapters of this module explain the principles of application servers and systematically discuss: a Mobile Application Servers based on WAP I Mode, J2ME and others; b Commerce Servers based on e payment systems, electronic catalogs, XML, secure C2B trade; c B2B Servers based on ebXML, Web Services, workflows, EDI, EAI; d Multimedia and Collaboration Servers based on groupware, SMIL and RTP; and e Super Application Servers that combine numerous services needed for Web, mobile applications and EC/EB applications on a single platform. IBM's WebSphere is an example. Chapters of the module also include several real life examples and case studies to highlight practical applications.
