Predicts the Mandela Effect Steve Adams, Have you heard of Dead Humanity theory It says that humanity died on 21 December 2012 exactly as predicted by the Mayans This might come as a big surprise to you given that you no doubt believe you are very much alive But are you Haven't you noticed that things have been getting seriously weird in the last few years Things don't seem to be as real as they used to be We seem to be in some fantasy world getting more bizarre by the second People are behaving extremely oddly Have we all actually become ghosts and just didn't realize we actually died Dead Humanity theory says that 21 December 2012 was actually when we were uploaded overnight into a technological Singularity and became part of an amazing simulation a true Matrix Our bodies became avatars so realistic we couldn't tell the difference or we were programmed not to see any difference We were given a new reality principle which was to accept the simulation as reality and to believe we had always been in this reality when in fact we only entered it a few years ago Our memories were adjusted by the Readjustment Bureau to make everything seem normal In the years leading up to the Death of Humanity many people were subjected to various test experiments to prove the concept They had their consciousness uploaded to the Singularity then back again Since they experienced different things in the Simulation they ended up with conflicting memories This all became known as the Mandela effect Some people in the simulation realized that things had

changed dramatically and they came up with the Dead Internet theory which said that the Internet wasn't the same as it used to be. It had actually died and been replaced by an Internet controlled by AI algorithms and bots. Most content on the Internet was bot-generated. Most social media updates were by bots. We were responding to a bot-created world that had less and less need for humans. These people hadn't got quite the right theory. It wasn't the Internet that had died; it was humanity. However, these people had powerfully intuited that something phenomenally strange was going on. They just hadn't realized how strange. As Sir Arthur Eddington said, "Not only is the universe stranger than we imagine, it is stranger than we can imagine." When in doubt, consult the Bible. It has all the answers. God's answers. What people have failed to realize is that the Bible itself predicts the Mandela effect.

Space-Time Geometries for Motion and Perception in the Brain and the Arts Tamar Flash, Alain Berthoz, 2021-01-04. This book is based on a two-day symposium at the Paris Institute of Advanced Study titled "space-time geometries and movement in the brain and the arts." It includes over 20 chapters written by the leading scientists and artists who presented their related research studies at the symposium and includes six sections: the first three focus on space-time geometries in perception, action, and memory, while the last three focus on specific artistic domains: drawing and painting, dance, music, digital arts, and robotics. The book is accompanied by a dedicated webpage including related images and videos. There is an ever-growing interest in the topics covered by this book. Space and time are of fundamental importance for our understanding of human perception, action, memory, and cognition and are entities which are equally important in physics, biology, neuroscience, and psychology. Highly prominent scientists and mathematicians have expressed their belief that our bodies and minds shape the ways we perceive space and time and the physical laws we formulate. Understanding how the brain perceives motion and generates bodily movements is of great significance. There is also growing interest in studying how space-time and movement subserves artistic creations in different artistic modalities, e.g., fine arts, digital, and performing arts, and music. This interest is inspired by the idea that artists make intuitive use of the principles and simplifying strategies used by the brain in movement generation and perception. Building upon new understanding of the spatio-temporal geometries subserving movement generation and perception by the brain, we can start exploring how artists make use of such neuro-geometrical and neuro-dynamic representations in order to express artistic concepts and emotionally affect the human observers and listeners. Scientists have also started formulating new ideas of how aesthetic judgements emerge from the principles and brain mechanisms subserving motor control and motion perception. Covering novel and multidisciplinary topics, this advanced book will be of interest to neuroscientists, behavioral scientists, artificial intelligence, and robotics experts, students, and artists.
