Software Prototyping Adoption Practice And Management:

   Software Prototyping Mike F. Smith,1991 The cost of producing software worldwide now approaches 250 billion annually much of it delivered late and over budget This book offers a better way prototyping The author suggests incorporating the input of end users early on radically changing the software process itself Controversial and highly readable

   Design Approaches and Tools in Education and Training Jan van den Akker,Robert Maribe Branch,Kent Gustafson,Nienke Nieveen,Tjeerd Plomp,2012-12-06 In our contemporary learning society expectations about the contribution of education and training continue to rise Moreover the potential of information and communication technology ICT creates many challenges These trends affect not only the aims content and processes of learning they also have a strong impact on educational design and development approaches in research and professional practices Prominent researchers from the Netherlands and the USA present their latest findings on these issues in this volume The major purpose of this book is to discuss current thinking on promising design approaches and to present innovative computer based tools The book aims to serve as a resource and reference work that will stimulate advancement in the field of education and training It is intended to be useful in academic settings as well as for professionals in design and development practices *Machine Learning in Production* Andrew Kelleher,Adam Kelleher,2019-02-27 Foundational Hands On Skills for Succeeding with Real Data Science Projects This pragmatic book introduces both machine learning and data science bridging gaps between data scientist and engineer and helping you bring these techniques into production It helps ensure that your efforts actually solve your problem and offers unique coverage of real world optimization in production settings From the Foreword by Paul Dix series editor Machine Learning in Production is a crash course in data science and machine learning for people who need to solve real world problems in production environments Written for technically competent accidental data scientists with more curiosity and ambition than formal training this complete and rigorous introduction stresses practice not theory Building on agile principles Andrew and Adam Kelleher show how to quickly deliver significant value in production resisting overhyped tools and unnecessary complexity Drawing on their extensive experience they help you ask useful questions and then execute production projects from start to finish The authors show just how much information you can glean with straightforward queries aggregations and visualizations and they teach indispensable error analysis methods to avoid costly mistakes They turn to workhorse machine learning techniques such as linear regression classification clustering and Bayesian inference helping you choose the right algorithm for each production problem Their concluding section on hardware infrastructure and distributed systems offers unique and invaluable guidance on optimization in production environments Andrew and Adam always focus on what matters in production solving the problems that offer the highest return on investment using the simplest lowest risk approaches that work Leverage agile principles to maximize development efficiency in production projects Learn from practical Python code examples and visualizations that bring essential algorithmic concepts to life Start

with simple heuristics and improve them as your data pipeline matures Avoid bad conclusions by implementing foundational error analysis techniques Communicate your results with basic data visualization techniques Master basic machine learning techniques starting with linear regression and random forests Perform classification and clustering on both vector and graph data Learn the basics of graphical models and Bayesian inference Understand correlation and causation in machine learning models Explore overfitting model capacity and other advanced machine learning techniques Make informed architectural decisions about storage data transfer computation and communication Register your book for convenient access to downloads updates and or corrections as they become available See inside book for details **Medical Modeling** Richard Bibb,Dominic Eggbeer,Abby Paterson,Mazher Iqbal Mohammed,2024-06-08 Medical Modelling The Application of Advanced Design and Additive Manufacturing Techniques in Medicine Third Edition provides readers with a thorough update of the core contents along with key information on innovative imaging techniques additive manufacturing technologies and a range of applied case studies This comprehensive new edition includes new coverage of advanced technologies such as selective laser melting electron beam melting multi jet fusion and more The extensive section of peer reviewed case studies is thoroughly updated and includes additional clinical examples describing the practical applications of advanced design technologies in surgical prosthetic orthotic dental and research applications Finally Medical Modelling The Application of Advanced Design and Additive Manufacturing Techniques in Medicine Third Edition explores the future potential of medical modelling such as in simulations for training the development of new medical devices and so on Covers the essential stages and methods of creating virtual and physical anatomical models from medical scan data Presents an overview of the main AM processes including advantages and limitations Provides worked examples and case studies with detailed descriptions of the applications of 3D scanning CAD and AM to a wide variety of anatomical surgical prosthetic orthotic and associated applications DRM, a Design Research Methodology Lucienne T.M. Blessing,Amaresh Chakrabarti,2009-06-13 The initial motivator for the development of DRM a Design Research Methodology and the subsequent writing of this book was our frustration about the lack of a common terminology benchmarked research methods and above all a common research methodology in design A shared view of the goals and framework for doing design research was missing Design is a multidisciplinary activity occurring in multiple application areas and involving multiple stakeholders As a consequence design research emerges in a variety of disciplines for a variety of applications with a variety of subjects This makes it particularly difficult to review its literature relate various pieces of work find common ground and validate and share results that are so essential for sustained progress in a research community Above all design research needs to be successful not only in an academic sense but also in a practical sense How could we help the community develop knowledge that is both academically and practically worthwhile Each of us had our individual ideas of how this situation could be improved Lucienne Blessing while finishing her thesis that involved studying and improving the design process developed valuable insights about

the importance and relationship of empirical studies in developing and evaluating these improvements Amaresh Chakrabarti while finishing his thesis on developing and evaluating computational tools for improving products had developed valuable insights about integrating and improving the processes of building and evaluating tools   Information Systems Development Jaroslav Pokorny,Vaclav Repa,Karel Richta,Wita Wojtkowski,Henry Linger,Chris Barry,Michael Lang,2011-09-02 Information Systems Development Business Systems and Services Modeling and Development is the collected proceedings of the 19th International Conference on Information Systems Development held in Prague Czech Republic August 25 27 2010 It follows in the tradition of previous conferences in the series in exploring the connections between industry research and education These proceedings represent ongoing reflections within the academic community on established information systems topics and emerging concepts approaches and ideas It is hoped that the papers herein contribute towards disseminating research and improving practice   **The Fourth International Workshop on Rapid System Prototyping** Nick Kanopoulos,1993 RSP 93 was held in Research Triangle Park North Carolina June 1993 Papers discuss prototyping tools problems issues techniques applications environments and design and test methodologies No index Acidic paper Annotation copyright by Book News Inc Portland OR   **Social Influences on Information and Communication Technology Innovations** Tatnall, Arthur,2012-05-31 It has been over twenty years since developments in actor network theory were first written on paper Since then the Information and Communication Technologies ICT community has begun to discover the power of using actor network theory as an explanatory framework for much of its research This research community has come to an understanding that information systems are of necessity socio technical in nature and require a socio technical approach to their investigation Thanks to developments in actor network theory researchers can now approach people and technology as one single entity that gives support to social influences on technological innovations Social Influences on Information and Communication Technology Innovations discusses in great detail the use of actor network theory in offering explanations for socio technical phenomena focusing greatly on information communication technologies Implementation and use of information and communication technologies inevitably involves the interactions of both technology and people This publication facilitates international growth in the body of research investigating the value of using actor network theory as a means of understanding socio technical phenomena and technological innovation   **A Comparison of Software Methodologies in the Development of a Serials Control System** Stan A.
