Solar And Planetary Dynamos:

Solar and Planetary Dynamos P. C. Matthews, 1993 Dynamo theory is the study of how large scale magnetic fields can arise in bodies such as the Earth Sun and stars and it brings together researchers in such diverse subjects as geophysics astronomy and nuclear reactor technology In this book are papers on the theory of dynamos delivered at the Isaac Newton Institute for Mathematical Sciences in Cambridge in September 1992 and these have been carefully brought together to form a unified presentation Topics covered include modelling of solar magnetic field generation theoretical studies of the dynamics of the Earth's core studies of the magnetic fields in galaxies and papers on fast dynamo the study of magnetic field regeneration in fluid of very high electrical conductivity This volume represents the most comprehensive and up to date record of research into the theory of dynamos

Lectures on Solar and Planetary Dynamos M. R. E. Proctor, A. D. Gilbert, 1994-12-08 Comprised of lectures for an intensive course held at the Newton Institute in Cambridge as part of a NATO Advanced Study Institute the topics covered within this volume include planetary and solar dynamos fast dynamos and the use of symmetry principles to derive evolution equations

Advances in Nonlinear Dynamos Antonio Ferriz-Mas, Manuel Nunez, 2019-04-24 Nonlinear dynamo theory is central to understanding the magnetic structures of planets stars and galaxies In chapters contributed by some of the leading scientists in the field this text explores some of the recent advances in the field Both kinetic and dynamic approaches to the subject are considered including fast dynamos topological methods in dynamo theory physics of the solar cycle and the fundamentals of mean field dynamo Advances in Nonlinear Dynamos is ideal for graduate students and researchers in theoretical astrophysics and applied mathematics particularly those interested in cosmic magnetism and related topics such as turbulence convection and more general nonlinear physics

Mathematical Aspects of Natural Dynamos Emmanuel Dormy, Andrew M. Soward, 2007-06-11 Although the origin of Earth's and other celestial bodies magnetic fields remains unknown we do know that the motion of electrically conducting fluids generates and maintains these fields forming the basis of magnetohydrodynamics MHD and to a larger extent dynamo theory Answering the need for a comprehensive interdisciplinary introduction

Stretch, Twist, Fold: The Fast Dynamo Stephen Childress, Andrew D. Gilbert, 2008-09-11 The study of the magnetic fields of the Earth and Sun as well as those of other planets stars and galaxies has a long history and a rich and varied literature including in recent years a number of review articles and books dedicated to the dynamo theories of these fields Against this background of work some explanation of the scope and purpose of the present monograph and of the presentation and organization of the material is therefore needed Dynamo theory offers an explanation of natural magnetism as a phenomenon of magnetohydrodynamics MHD the dynamics governing the evolution and interaction of motions of an electrically conducting fluid and electromagnetic fields A natural starting point for a dynamo theory assumes the fluid motion to be a given vector field without regard for the origin of the forces which drive it The resulting kinematic dynamo theory is in the non relativistic case a linear advection diffusion problem for the magnetic field This kinematic theory while far simpler than its magnetohydrodynamic counterpart remains a formidable analytical problem since the interesting solutions lack the easiest symmetries Much of the research has focused on the simplest acceptable flows and especially on cases where the smoothing effect of diffusion can be exploited A close analog is the advection and diffusion of a scalar field by laminar flows the diffusion being measured by an appropriate Peclet number This work has succeeded in establishing dynamo action as an attractive candidate for astrophysical magnetism
