

# SIOC 209 Subversive Science

Tue/Thurs 1100-1220 Spring Quarter 2024  
Spiess Hall Room 303 on the SIO Campus

Western science originated and developed within societies characterized by concentrations of power and wealth, anti-Blackness and racism, cis-heteropatriarchy, exploitation of the more-than-human world and marginalized human populations, and associated injustices. SIOC 209 Subversive Science explores how justice might be foregrounded in the Earth and Oceanographic sciences using recent scholarship and experience with how to do so from a range of perspectives.

The course will consist of three main sections:

- 1) Summary of historical connections between science and systems of exploitation and extraction resulting in injustices, using reading selections and class discussions.
- 2) Detailed study of methods for foregrounding justice in scientific practice grounded in historical and recent experience (including Indigenous Environmental Science, Fugitive Science, Slow Science, Solidarity Science, Black Physics, Critical Environmental Justice, the CLEAR Lab, and Abolition Science) – small student groups will research and present on each method.
- 3) Exploration of the application of these methods to students' ongoing or planned future research, culminating in final project presentations.

## Why 'Subversive Science'?

Subversion is the 'undermining of the power and authority of an established system or institution.' The inspiration for using subversive in the title of this course comes from Fugitive Science, where Black amateur scientists were working to undermine the power and authority of racial science in the scientific establishment of the day (pre-civil war US) by creating alternative ways of conducting science that foregrounded justice. This idea captures the goals of SIOC 209 Subversive Science, to help students to explore methods for undermining the power and authority of unjust practices in science by creating alternatives.

**The Subversive Science** Paul Shepard, 1969 Population explosion pollution suburban sprawl death of the city the vanishing wilderness we keep hearing of these threats but usually manage to ignore them In this book we find instead a number of clear calm discussions of environmental problems providing information and ideas without excessive emotional appeal The 37 papers chosen from a wide variety of journals such as Human Biology Daedalus Landscape American Scientist are obviously intended for the nonspecialist intelligent reader They are divided into five groups of which the first deals with population problems both human and animal The Environmental Encounter is the title of a group of papers discussing man's reaction to his environment what he sees and the way he feels about it Here are included comments on American front yards the shapes of roofs in different European countries the importance of sacred places and an essay by Alan Watts reprinted from The Psychedelic Review The third and fourth sections are called Man and Other Organisms and Man in Ecosystems Here we learn about the domestication of cattle sidelights on evolution Ren Dubos comments on the germ theory the possible unexpected effects of pesticides and radiation A hopeful note appears in a discussion of the use of solar energy The final part called Ethos Ecos and Ethics includes more philosophical commentaries Especially interesting is a discussion by Lynn White of the historical roots of our ecologic crisis from a review by Marjorie C Meehan in [jama.jamanetwork.com article.asp?articleid=345416](http://jama.jamanetwork.com/articleid/345416)

**The Organon** Aristotle,1908 [Faith in America](#) Charles H. Lippy,2006-09-30 Over the last 25 years there has been much talk of the presumed decline in religious participation in America In addition from the 1960s on surveys that mark the influence of religion in American life have shown a mixed response Many suggest that religion is losing influence in the culture as a whole others indicate that while organized religion may be experiencing challenges spirituality is on the upswing At the same time however there have been signs that religious life in the U S is extraordinarily healthy But religion in America has changed to be sure in a number of ways And it has changed us and our culture in return This timely set looks at the major forces that are changing the shape of religion in American life With an influx of immigrants from Asia Latin America and other regions the diversity of religion has grown to include Buddhism Hinduism Islam and other faiths Latin American and African American communities have experienced changes in the ways they practice their faith and in turn influence American culture in general Women have entered the clergy in record numbers and the push for allowing women and gays to enter the clergy in religions that limit or prohibit their roles is on the increase In addition gay couples are leading the same sex marriage movement and other social issues such as abortion stem cell research end of life care etc are still being debated Interest over how people actually live out their religion or spirituality has mushroomed in recent decades thanks in part to the information revolution and popular culture What folks do when they gather together to worship and where they come together has changed dramatically with the advent of the Internet and the role of sports in American life So much has changed and faith in America has become more important than ever as part of our culture our way of life and the way we relate to each other and the world around us The essays found in these pages shed light on our understanding of these transformations and help us comprehend the enormous role of religion in our society and in our world
