

Geographic Information Systems

Geographic Information Systems (GIS) is a technology that manages, analyzes, and disseminates geographic knowledge. Essentially, GIS is maps on computers. Each characteristic of the Earth's surface is mapped on a layer which can be viewed independently, or in combination with other layers.

Figure 1-4 A geographic information system. GIS involves storing information about a location in layers. Each layer represents a different piece of human or environmental information. The layers can be viewed individually or in combination.

Geographical Information Systems in Hydrology V.P. Singh, M. Fiorentino, 2013-03-09 The last few years have witnessed an enormous interest in application of GIS in hydrology and water resources This is partly evidenced by organization of several national and international symposia or conferences under the sponsorship of various professional organizations This increased interest is in a large measure in response to growing public sensitivity to environmental quality and management The GIS technology has the ability to capture store manipulate analyze and visualize the diverse sets of geo referenced data On the other hand hydrology is inherently spatial and distributed hydrologic models have large data requirements The integration of hydrology and GIS is therefore quite natural The integration involves three major components 1 spatial data construction 2 integration of spatial model layers and 3 GIS and model interface GIS can assist in design calibration modification and comparison of models This integration is spreading worldwide and is expected to accelerate in the foreseeable future Substantial opportunities exist in integration of GIS and hydrology We believe there are enough challenges in use of GIS for conceptualizing and modeling complex hydrologic processes and for globalization of hydrology The motivation for this book grew out of the desire to provide under one cover a range of applications of GIS technology in hydrology It is hoped that the book will stimulate others to write more comprehensive texts on this subject of growing importance

Geographic Information Science and Systems Paul A. Longley, Michael F. Goodchild, David J. Maguire, David W. Rhind, 2015-03-12 Effective use of today's vast geographic information GI resources requires more than just powerful technology for problem solving It requires science to help us understand the way the world works and to help us devise effective procedures for making decisions Three previous editions have established this text as a defining multidisciplinary treatment of the scientific principles that underpin the use of geographic information technologies for problem solving This extensively revised and updated edition provides a guide to the enduring scientific principles and information systems that support effective use of today's GI It also provides a primer on essential methods for analysis of GI and the ways in which effective management of GI informs policy and action
