### 4.1. System analysis

This study engaged system analysis to collect information regarding needs of database system development of medicinal plants. An analysis was conducted to model a running business process and thus proposing a new one. The model uses context diagram model as in shown in Figure 1.

**Figure 1.** Context diagram of system proposed

From the Figure 1, this study formulated three functional system requirements, i.e.:

1. **Administrator:** an operator whose role is to input data from expert into descriptions of medicinal plants, not to modify the data of medicinal plant.
2. **Contributor:** Public who can register and log into the system to add and modify the data of medicinal plants
3. **Expert:** specialists and practitioners of medicinal plants registered by the administrator to add and modify the data of medicinal plants.

Furthermore, the previous functional were then elaborated into five functions which are related to system users (actor). The system is accessed by three actors, i.e. administrator, contributor, and expert. Every actor needs to log into the system before using it. The following Figure 2 displays the designed use case diagram.
