Soft Computing In Information Retrieval:

Soft Computing in Information Retrieval Fabio Crestani, Gabriella Pasi, 2000-05-26 Information retrieval IR aims at defining systems able to provide a fast and effective content based access to a large amount of stored information The aim of an IR system is to estimate the relevance of documents to users information needs expressed by means of a query This is a very difficult and complex task since it is pervaded with imprecision and uncertainty Most of the existing IR systems offer a very simple model of IR which privileges efficiency at the expense of effectiveness A promising direction to increase the effectiveness of IR is to model the concept of partially intrinsic in the IR process and to make the systems adaptive i e able to learn the user s concept of relevance To this aim the application of soft computing techniques can be of help to obtain greater flexibility in IR systems

Fuzzy Information Retrieval Donald H. Kraft, Erin Colvin, 2017-01-23 Information retrieval used to mean looking through thousands of strings of texts to find words or symbols that matched a user s query Today there are many models that help index and search more effectively so retrieval takes a lot less time Information retrieval IR is often seen as a subfield of computer science and shares some modeling applications storage applications and techniques as do other disciplines like artificial intelligence database management and parallel computing This book introduces the topic of IR and how it differs from other computer science disciplines A discussion of the history of modern IR is briefly presented and the notation of IR as used in this book is defined The complex notation of relevance is discussed Some applications of IR is noted as well since IR has many practical uses today Using information retrieval with fuzzy logic to search for software terms can help find software components and ultimately help increase the reuse of software This is just one practical application of IR that is covered in this book Some of the classical models of IR is presented as a contrast to extending the Boolean model This includes a brief mention of the source of weights for the various models In a typical retrieval environment answers are either yes or no i e on or off On the other hand fuzzy logic can bring in a degree of match vs a crisp i e strict match This too is looked at and explored in much detail showing how it can be applied to information retrieval Fuzzy logic is often times considered a soft computing application and this book explores how IR with fuzzy logic and its membership functions as weights can help indexing querying and matching Since fuzzy set theory and logic is explored in IR systems the explanation of where the fuzz is ensues The concept of relevance feedback including pseudorelevance feedback is explored for the various models of IR For the extended Boolean model the use of genetic algorithms for relevance feedback is delved into The concept of query expansion is explored using rough set theory Various term relationships is modeled and presented and the model extended for fuzzy retrieval An example using the UMLS terms is also presented The model is also extended for term relationships beyond synonyms Finally this book looks at clustering both crisp and fuzzy to see how that can improve retrieval performance An example is presented to illustrate the concepts

Soft Computing in Web Information Retrieval Enrique Herrera-Viedma, Gabriella Pasi, Fabio Crestani, 2008-08-15

This book presents recent studies on the application of Soft Computing techniques in information access on the World Wide Web. The book is divided in four parts reflecting the areas of research of the presented works such as Document Classification, Semantic Web, Web Information Retrieval, and Web Applications. The text demonstrates that Web Information Retrieval is a stimulating area of research where Soft Computing technologies can be applied satisfactorily. **Soft Computing in Information Retrieval** Fabio Crestani, Gabriella Pasi, 2014-01-15 **Soft Computing for Information Processing and Analysis** Masoud Nikravesh, Lotfi A. Zadeh, 2006-07-02

Search engines with Google at the top have become the most heavily used online service with millions of searches performed every day and many remarkable capabilities. Soft Computing for Information Processing and Analysis includes reports from the front of soft computing in the internet industry and imparts knowledge and understanding of the significance of the field's accomplishments, new developments, and future directions. This carefully edited book has evolved from presentations made by the participants of a meeting entitled Fuzzy Logic and the Internet: Enhancing the Power of the Internet, organized by the Berkeley Initiative in Soft Computing (BISC), University of California Berkeley. It addresses the important topics of modern search engines such as fuzzy query decision analysis and support systems, including articles about topics such as Web Intelligence, World Knowledge, and Fuzzy Logic by Lotfi A. Zadeh, perception based information processing or web intelligence. *Soft Computing in Web Information Retrieval* Enrique Herrera-Viedma, Gabriella Pasi, Fabio Crestani, 2009-09-02

Applications of Soft Computing for the Web Rashid Ali, MM Sufyan Beg, 2018-01-08

This book discusses the applications of different soft computing techniques for the web based systems and services. The respective chapters highlight recent developments in the field of soft computing applications from web based information retrieval to online marketing and online healthcare. In each chapter, the author endeavors to explain the basic ideas behind the proposed applications in an accessible format for readers who may not possess a background in these fields. This carefully edited book covers a wide range of new applications of soft computing techniques in Web recommender systems, Online documents classification, Online documents summarization, Online document clustering, Online market intelligence, Web usage profiling, Web data extraction, Social network extraction, Question answering systems, Online health care, Web knowledge management, Multimedia information retrieval, Navigation guides, User profiles extraction, Web based distributed information systems, Web security applications, Internet of Things Applications, and so on. The book is aimed for researchers and practitioners who are engaged in developing and applying intelligent systems principles for solving real life problems. Further, it has been structured so that each chapter can be read independently of the others. Efficient Information

Retrieval Using Soft Computing Techniques Bhatnagar Pragati, 2015-07-27 The book entitled Efficient Information Retrieval Using Soft Computing Techniques explores the use of Soft Computing technique for designing efficient retrieval system In past few decades information collection and storage efforts have become easier but efforts required to retrieve relevant information have become significantly cumbersome especially in textual databases Thus designing an efficient Information retrieval system is challenging task and an important area of research Only users with extensive subject area knowledge and systems knowledge are capable to manoeuvre and explore from these databases In spite of the work done in the field of Information Retrieval there is a large scope in this field in order to improve the efficiency of an IRS Naturally research on information models that can effectively rank search results according to document relevance has become a fundamental subject of interest Thus the Book targets an important area of research *Soft Computing Applications to Intelligent Information Retrieval on the Internet* O. Intelligent Exploration of the Web Piotr S. Szczepaniak, Javier Segovia, Lotfi A. Zadeh, 2002-11-26 The Web is the nervous system of information society As such it has a pervasive influence on our daily lives And yet in some ways the Web does not have a high MIQ Machine IQ What can be done to enhance it This is the leitmotif of Intelligent Exploration of the Web IEW a collection of articles co edited by Drs Szczepaniak Segovia Kacprzyk and to a small degree myself The articles that comprise IEW address many basic problems ranging from structure analysis of Internet documents and Web dialogue management to intelligent Web agents for extraction of information and bootstrapping an ontology based information extraction system Among the basic problems one that stands out in importance is the problem of search Existing search engines have many remarkable capabilities But what is not among them is the deduction capability

the capability to answer a query by drawing on information which resides in various parts of the knowledge base An example of a query might be How many Ph D degrees in computer science were granted by European universities in 1996 No existing search engine is capable of dealing with queries of comparable or even much lower complexity Basically what we would like to do is to add deduction capability to a search engine with the aim of transforming it into a question answering system or a QI A system for short This is a problem that is of major importance and a challenge that is hard to meet
