## **Solid State Ionics 2002:**

**Solid-State Ionics - 2002: Volume 756** Philippe Knauth, 2003-04-17 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners Solid State Ionics: Trends In The New Millennium, Proceedings Of The 8th Asian Conference B V R Chowdari, S R Sahaya Prabaharan, M Yahaya, I A Talib, 2002-12-04 This volume presents a comprehensive collection of state of the art advances in the field of solid state ionic materials and the design fabrication and performance of devices that use them such as lithium batteries gas sensors fuel cells supercapacitors and electrochromic displays These electrochemical devices are becoming pervasive in our technologically driven lifestyles The book includes research activities being carried out in the new millennium through special keynote addresses as well as invited and contributed papers related to experimental and theoretical modeling in solid state ionics The excellent coverage of topics arranged in such a fashion helps students and beginners to understand the field with enthusiasm It also encompasses various experimental techniques often employed in solid state ionics research such as XRD XPS hole burning spectroscopy EDAX EXAFS SEM thermal analysis techniques ac impedance spectroscopy and other electrochemical techniques such as cyclic voltammetry galvanostatic and potentiostatic electrochemical techniques Theoretical and applied aspects of mixed conduction for applications mainly in solid oxide fuel cells occupy a portion of the text Finally this volume demonstrates the amount of research activities being carried out in this application oriented field Solid State Ionics will be of interest to all in the solid state ionics community including chemists physicists materials scientists and electrochemists both in industry and in research *Solid-state Ionic Devices III* E. D. Wachsman, 2003 **VI Meeting Fundamental Problems of Solid State Ionics** Meeting Fundamental Problems of Solid State Ionics, 2003 *Solid State Electrochemistry II* Vladislav V. Kharton, 2012-12-21 The ideal addition to the companion volume on fundamentals methodologies and applications this second volume combines fundamental information with an overview of the role of ceramic membranes electrodes and interfaces in this important interdisciplinary and rapidly developing field Written primarily for specialists working in solid state electrochemistry this first comprehensive handbook on the topic focuses on the most important developments over the last decade as well as the methodological and theoretical aspects and practical applications This makes the contents equally of interest to material physical and industrial scientists and to physicists Also available as a two volume set **Perovskite Oxide for Solid Oxide Fuel Cells** Tatsumi Ishihara, 2009-06-12 Fuel cell technology is quite promising for conversion of chemical energy of hydrocarbon fuels into electricity without forming air pollutants There are several types of fuel cells polymer electrolyte fuel cell PEFC phosphoric acid fuel cell PAFC molten carbonate fuel cell MCFC solid oxide fuel cell SOFC and alkaline fuel cell AFC Among these SOFCs are the most efficient and have various advantages such as flexibility in fuel high reliability simple balance of plant BOP and a long history Therefore SOFC technology is attracting much attention as a power plant and is now close to marketing as a combined heat and power generation system

From the beginning of SOFC development many perovskite oxides have been used for SOFC components for example LaMnO<sub>3</sub> based oxide for the cathode and 3 LaCrO<sub>3</sub> for the interconnect are the most well known materials for SOFCs The 3 current SOFCs operate at temperatures higher than 1073 K However lowering the operating temperature of SOFCs is an important goal for further SOFC development Reliability durability and stability of the SOFCs could be greatly improved by decreasing their operating temperature In addition a lower operating temperature is also beneficial for shortening the startup time and decreasing energy loss from heat radiation For this purpose faster oxide ion conductors are required to replace the conventional Y<sub>2</sub>O<sub>3</sub> stabilized ZrO<sub>2</sub> electrolyte A new class of electrolytes such as LaGaO<sub>3</sub> is considered to be 3 highly useful for intermediate temperature SOFCs

**Fuel Cells Compendium** Dr. Nigel N.P Brandon, Dr. David Thompsett, 2005-11-24 Fuel cells continue to be heralded as the energy source of the future and every year an immense amount of research time and money is devoted making them more economically and technically viable Fuel Cells Compendium brings together an up to date review of the literature and commentary surrounding fuel cells research Covering all relevant disciplines from science to engineering to policy it is an exceptional resource for anyone with an invested interest in the field Provides an comprehensive selection of reviews and other industrially focused material on fuel cells research Broadly scoped to encompass many disciplines from science to engineering to applications and policy In depth coverage of the two major types of fuel cells Ceramic Solid Oxide and Polymers Proton Exchange Membranes
