## **Solid State Random Lasers:**

**Solid-State Random Lasers** Mikhail Noginov, 2006-07-04 Random lasers are the simplest sources of stimulated emission without cavity with the feedback provided by scattering in a gain medium First proposed in the late 1960s random lasers have grown to a large research field This book reviews the history and the state of the art of random lasers provides an outline of the basic models describing their behavior and describes the recent advances in the field The major focus of the book is on solid state random lasers However it also briefly describes random lasers based on liquid dyes with scatterers The chapters of the book are almost independent of each other So the scientists or engineers interested in any particular aspect of random lasers can read directly the relevant section Researchers entering the field of random lasers will find in the book an overview of the field of study Scientists working in the field can use the book as a reference source

**Solid-State Random Lasers** Mikhail Noginov, 2008-11-01 Random lasers are the simplest sources of stimulated emission without cavity with the feedback provided by scattering in a gain medium First proposed in the late 1960s random lasers have grown to a large research field This book reviews the history and the state of the art of random lasers provides an outline of the basic models describing their behavior and describes the recent advances in the field The major focus of the book is on solid state random lasers However it also briefly describes random lasers based on liquid dyes with scatterers The chapters of the book are almost independent of each other So the scientists or engineers interested in any particular aspect of random lasers can read directly the relevant section Researchers entering the field of random lasers will find in the book an overview of the field of study Scientists working in the field can use the book as a reference source

**Mid-Infrared Coherent Sources and Applications** Majid Ebrahim-Zadeh, Irina T. Sorokina, 2008-01-02 Covering fundamental principles and the state of the art this is a collection of reviews from experts in mid infrared mid IR coherent sources Among the sources covered are optical parametric oscillators difference frequency generators and the most recent broadband crystalline quantum cascade and fiber lasers The authors show how advances in mid IR science and technology make these sources indispensable for a variety of applications

**Advanced Solid State Photonics** , 2004 **Biophotonics: Spectroscopy, Imaging, Sensing, and Manipulation** Baldassare Di Bartolo, John Collins, 2010-12-14 This volume describes an impressive array of the current photonic related technologies being used in the investigation of biological systems The topics include various types of microscopy fluorescence correlation microscopy two photon microscopy sensitive detection of biological molecules nano surgery techniques fluorescence resonance energy transfer nano plasmonics terahertz spectroscopy and photosynthetic energy conversion The emphasis is on the physical principles behind each technique and on examining the advantages and limitations of each The book begins with an overview by Paras Prasad a leader in the field of biophotonics of several important optical techniques currently used for studying biological systems In the subsequent chapters these techniques are discussed in depth providing the reader with a detailed understanding of the basic physical principles at work An excellent

treatment of terahertz spectroscopy demonstrates how photonics is being extended beyond the visible region Recent results in the use of femtosecond lasers as a tool to porate cell walls demonstrate that the manipulation of light can be used as a tool for the study and the treatment of biological systems The field of Bio photonics is broad and still growing so cannot be covered comprehensively in one volume But here the reader will find an introduction to some of the major tools used for studying biological systems and at the same time a detailed first principles treatment of the physics behind these tools

**Optical Processes in Microparticles and Nanostructures** Ali Serpenguzel, Andrew W. Poon, 2011 This Festschrift is a tribute to the eminent scholar Professor Richard Kounai Chang on his retirement from Yale University on June 12 2008 During his over four decades of scientific exploration Professor Chang has made a lasting contribution to the development of linear and nonlinear optics and devices in confined geometries of surface second harmonic generation and surface enhanced Raman scattering and of novel methods for detecting airborne aerosol pathogens This volume assembles a collection of articles contributed by former students collaborators and colleagues of Professor Chang all over the world The topics span a diverse scope in applied optics frontiers many of which are rooted in Professor Chang s pioneering research

**Basics of Laser Physics** Karl F. Renk, 2017-03-30 This textbook provides an introductory presentation of all types of lasers It contains a general description of the laser a theoretical treatment and a characterization of its operation as it deals with gas solid state free electron and semiconductor lasers This expanded and updated second edition of the book presents a description of the dynamics of free electron laser oscillation using a model introduced in the first edition that allows a reader to understand basic properties of a free electron laser and makes the difference to conventional lasers The discussions and the treatment of equations are presented in a way that a reader can immediately follow The book addresses graduate and undergraduate students in science and engineering featuring problems with solutions and over 400 illustrations

High Power Diode Lasers Friedrich Bachmann, Peter Loosen, Reinhart Poprawe, 2007-03-12 The book summarizes the work and the results of a five year government funded research project as well as subsequent research results about high power diode laser systems and their application in the field of materials processing The entire technology chain starting from the semiconductor technology over cooling mounting and assembly beam shaping and system technology down to the applications in processing of several kinds of materials metals polymers are treated in the book Theoretical models a wide field of important parameters and practical hints and tips are provided The book is the most extensive work on high power diode laser systems and
