Dimer Models and Calabi-Yau Algebras Nathan Broomhead,2012-01-23 In this article the author uses techniques from algebraic geometry and homological algebra together with ideas from string theory to construct a class of 3 dimensional Calabi Yau algebras The Calabi Yau property appears throughout geometry and string theory and is increasingly being studied in algebra He further shows that the algebras constructed are examples of non commutative crepant resolutions NCCRs in the sense of Van den Bergh of Gorenstein affine toric threefolds Dimer models first studied in theoretical physics give a way of writing down a class of non commutative algebras as the path algebra of a quiver with relations obtained from a superpotential Some examples are Calabi Yau and some are not The author considers two types of consistency conditions on dimer models and shows that a geometrically consistent dimer model is algebraically consistent He proves that the algebras obtained from algebraically consistent dimer models are 3 dimensional Calabi Yau algebras This is the key step which allows him to prove that these algebras are NCCRs of the Gorenstein affine toric threefolds associated to the dimer models
