Economics and Climate Emergency Barry Gills, Jamie Morgan, 2022-08-22. This book explores a series of connected themes focused on the role economics and other influential forms of theory and thinking have played in creating the current predicament and the scope for alternatives and how they might be framed. Thirty years have passed since the inception of the United Nations Framework Convention on Climate Change (UNFCCC) and the beginning of policy on climate change. Thirty wasted years. To most politicians, long-term collective interest has been denominated in meaningless units of time: a never and forever that has continually delayed action. From complacency has come potential disaster, and we are now living in a time of climate emergency and ecological breakdown. The next decade is a pivotal period requiring fundamental change. But numerous impediments remain. Continual material energy and economic growth on a planetary scale are manifestly impossible, and yet economic theory takes these as a given, and political leadership and policy seem unwilling to accept brute reality. Instead, they offer a series of implausible commitments and pledges rooted in technofixes without addressing the fundamental drivers of the problems the world faces. The edited volume explores the issues and offers a variety of ways to think through the problems at hand, from postgrowth, degrowth, and social-ecological economics to policy assemblage and transversalism. The chapters in this book were originally published in the journal *Globalizations*. *Beyond the Minimal* Peter Allison, Adolf Krischanitz, Architectural Association (Great Britain), ARTEC (Firm), Pauhof (Firm), 1998. Beyond the
