## **The Automated Battlefield:**

The Automated Battlefield Frank Barnaby,1986      The Electronic Battlefield Paul Dickson,1976 Today's American Military is the most technologically advanced fighting force in the history of the world Drone aircraft spy on and attack and destroy designated targets acting on commands from half a world away Remote control warfare has come into the world forcing our society to face endless new questions from the morality of doing battle without risk to the emotional debate over whether drone operators can distinguish a band of terrorists from a group assembling for a wedding And the drones are merely the most dramatic and visible example of astonishing unstoppable technological advance in the military Battlefield sensors and satellite imagery provide a flood of information to commanders Computers themselves have become targets and weapons How did it get that way How and when were the decisions made the weapons created the strategies and tactics chosen that brought us to this point In this classic account Paul Dickson takes us back to the waning days of the Vietnam conflict and the earliest days of push button war and the startling story of the birth of The Electronic Battlefield      Tactical Automation on the Battlefield Robert N. Townsend,U.S. Army Command and General Staff College. School of Advanced Military Studies,1992      Arms and Artificial Intelligence Stockholm International Peace Research Institute,1987 The impact of information technology in the field of military decision making is superficially less visible than that of a number of other weapon developments though its importance has grown steadily since the beginning of the 1980s Owing to its potential role in modern weapon systems and the prospect of its inclusion as an essential ingredient in many military projects such as the Strategic Defence Initiative it has become the focus of special interest and efforts This book is the first attempt to present a broad overview of the prospects for information technology in general and machine intelligence in particular in the context of international security The dangers and promises of weapon and arms control applications of computers and artificial intelligence to decision making processes are analysed in a technical strategic and political perspective by experts from six different countries In an introductory chapter Allan Din presents a generic overview of artificial intelligence and its prospects Thirteen contributors then discuss the conceptual and technical framework of artificial intelligence analyse implications for weapon systems and strategy and discuss possible applications to arms control verification and modelling
