Tight Junction:

Tight Junctions Lorenza González-Mariscal, 2007-02-26 Tight junctions (TJs) are cell-cell adhesion belts that encircle epithelial and endothelial cells at the limit between the apical and the lateral membrane. These junctions are crucial for the establishment of separate compartments in multicellular organisms and for the exchange of substances between the internal milieu and the external environment. The perception of TJs has changed over the years. From being regarded as static paracellular seals, they have come to be perceived as dynamic structures that adjust their morphology and function in response to physiological, pharmacological, and pathological challenges. The roles that TJs play in epithelial and endothelial cells has also widened, and nowadays this structure is regarded not only as a fence that limits within the membrane the movement of proteins and lipids between the apical and basolateral membranes or as a gate that regulates in a size and charge selective manner the transit of ion and molecules through the paracellular pathway, but also as a structure integrated by molecules that participate in the control of cell proliferation. These observations highlight the importance of understanding TJ physiology in order to develop effective strategies for the treatment of pathological conditions such as cancer and autoimmune diseases. This broader perception of TJs is reflected in all the chapters of the book and has been attained thanks to the identification in recent years of a wide array of proteins that constitute TJs in epithelial and endothelial cells, as well as in central nervous system myelin.

Tight Junctions Marcelino Cerejido, James M. Anderson, 2001-06-26 As the first detailed overview of the subject, *Tight Junctions* brought together diverse perspectives from leading investigators to provide a multidisciplinary overview of the field. Since its publication in 1992, there has been an explosion of information about tight junctions, particularly in the area of molecular structure, cell and molecular biology.

[Molecular Structure and Function of the Tight Junction](#) Michael Fromm, Jörg-Dieter Schulzke, 2009-06-22 Aim of this volume is to clarify the relationship between molecular structure and function of tight junction proteins, as well as their regulation and their role in diseases. Current research may form a basis for future diagnostic and therapeutic approaches to diseases which seem to have not much in common but are characterized by defects of organ barriers like Crohn's disease, renal hypertension, inner ear deafness, and cancerous diseases. Topics include the functions of distinct tight junction proteins as barrier or channel formers for solutes and water, characteristics of the tight junction in inflammatory bowel diseases, posttranslational modifications of tight junction proteins, the relation between renal tight junction proteins and blood pressure control, and the molecular structure of claudin-claudin interactions. connect epithelial and endothelial cells and importantly form selective barriers and channels for paracellular transportation. Two types of tight junction proteins, the claudin family (claudins 1 to 27) and the TAMP family (occludin, Marvel D2, and tricellulin) can be distinguished molecularly and functionally. Recent work has focused on delineating the functional significance of differences in selective permeability, for example by examining the regulatory mechanisms of tight junctions. This work is of great clinical importance as many inflammatory or infectious diseases are characterized by increased permeability, and the manipulation of tight junctions presents a new horizon in the development of novel therapeutics. The volume *Barriers and Channels Formed by Tight Junction Proteins II* provides a detailed look at the recent advances in our understanding of tight junction regulation and dysregulation. The papers included focus on three major themes: inflammation and gastrointestinal function, epithelial transport barrier modulation, and food components and tight junctions in intestinal and renal epithelia. This book provides an updated account of tight junctions of different epithelia and endothelia and addresses their anatomy, biochemistry, physiology, synthesis, assembly, and modulation. It also discusses the relationship between molecular structure, function, regulation, posttranslational modifications of tight junction proteins, and their role in gut microbiota, maintenance, epithelial-mesenchymal transition, and intestinal barrier dysfunction associated disorders important for the progression of human cancers. This book presents the pathological alterations of tight junctions at the blood-brain barrier that intensify or even initiate neurological dysfunction. Further, it reviews the significance of tight junctions and tight junction proteins in cancer development, infectious diseases, allergic reactions, and autoimmune disorders. Lastly, it highlights strategies for modulating tight junctions to enhance drug availability and organ deposition. This book is immensely useful for basic, translational, clinical, and interdisciplinary cancer researchers, practicing oncologists, and immunologists.

The Tight Junction and Its Proteins Michael Fromm, Susanne M. Krug, 2020

For a long time, the tight junction (TJ) was known to form and regulate the paracellular barrier between epithelia and endothelial cell sheets. Starting shortly after the discovery of the proteins forming the TJ, mainly the two families of claudins and TAMPs, several other functions have been discovered, a striking one being the surprising finding that some claudins form paracellular channels for small ions and/or water. This Special Issue includes 43 articles covering numerous dedicated topics, including pathogens affecting the TJ barrier, TJ regulation via immune cells, the TJ as a therapeutic target, TJ and cell polarity function, and regulation by proteins of the tricellular TJ, TJ as a regulator of cellular processes, organ and tissue-specific functions, TJ as sensors, and reacting to environmental conditions, and last but not least, TJ proteins and cancer.
