Templates for the Solution of Algebraic Eigenvalue Problems Zhaojun Bai,James Demmel,Jack Dongarra,Axel Ruhe,Henk van der Vorst,2000-01-01 Large scale problems of engineering and scientific computing often require solutions of eigenvalue and related problems This book gives a unified overview of theory algorithms and practical software for eigenvalue problems It organizes this large body of material to make it accessible for the first time to the many nonexpert users who need to choose the best state of the art algorithms and software for their problems Using an informal decision tree just enough theory is introduced to identify the relevant mathematical structure that determines the best algorithm for each problem *Parallel Scientific Computation* Rob H. Bisseling,2020-09-30 Building upon the wide ranging success of the first edition *Parallel Scientific Computation* presents a single unified approach to using a range of parallel computers from a small desktop computer to a massively parallel computer The author explains how to use the bulk synchronous parallel BSP model to design and implement parallel algorithms in the areas of scientific computing and big data and provides a full treatment of core problems in these areas starting from a high level problem description via a sequential solution algorithm to a parallel solution algorithm and an actual parallel program written in BSPLib Every chapter of the book contains a theoretical section and a practical section presenting a parallel program and numerical experiments on a modern parallel computer to put the theoretical predictions and cost analysis to the test Every chapter also presents extensive bibliographical notes with additional discussions and pointers to relevant literature and numerous exercises which are suitable as graduate student projects The second edition provides new material relevant for big data science such as sorting and graph algorithms and it provides a BSP approach towards new hardware developments such as hierarchical architectures with both shared and distributed memory A single simple hybrid BSP system suffices to handle both types of parallelism efficiently and there is no need to master two systems as often happens in alternative approaches Furthermore the second edition brings all algorithms used up to date and it includes new material on high performance linear system solving by LU decomposition and improved data partitioning for sparse matrix computations The book is accompanied by a software package BSPedupack freely available online from the author s homepage which contains all programs of the book and a set of test driver programs This package written in C can be run using modern BSPLib implementations such as MulticoreBSP for C or BSPonMPI *SIAM Journal on Scientific Computing* ,2006 *Business Software Directory* ,1986 **IGARSS 2004** ,2004 **The Cumulative Book Index** ,1996 A world list of books in the English language **Proceedings of the ASME Fluids Engineering Division Summer Meeting** American Society of Mechanical Engineers.
