Ashworth,1974-12 One of the most universal functions of any scientific or engineering laboratory is the gathering of data to provide answers to immediate questions or information to be filed for future reference Such data gathering may be achieved in various ways depending on the nature and quantity of the information The most prevalent of such data gathering methods is undoubtedly analog recording Electrical analog recorders are available in a variety of sizes speeds sensitivities and prices They are suitable for recording any signal which is in or can be converted to electrical form These recorders are found in every modern laboratory Without them the importance of many functional relations would be missed altogether How could one adequately diagnose a heart ailment without a cardiographic recorder or obtain infrared or magnetic resonance spectra on any practicable basis without a strip chart recorder True various curves that are now traced automatically with a recorder can be plotted manually from point by point measurements This procedure however is not only time consuming but may cause valid bits of information to be overlooked entirely simply because the points were taken too far apart Another factor favoring the use of recorders is the ability to pinpoint faulty operation of the data gathering system Artifacts that might not be observable at all in point by point observations 1 The Laboratory Recorder 2 will often be readily identifiable on a recording Asymmetry of a peaked curve for example is only clearly evident in a recording

Sound Recording David Morton, 2006-03-10 How did one of the great inventions of the nineteenth century Thomas Edison's phonograph eventually lead to one of the most culturally and economically significant technologies of the twentieth and twenty first centuries Sound Recording traces the history of the business boom and the cultural revolution that Edison's invention made possible Recorded sound has pervaded nearly every facet of modern life not just popular music but also mundane office dictation machines radio and television programs and even telephone answering machines Just as styles of music have evolved so too have the formats through which sound has been captured from 78s to LPs LPs to cassette tapes tapes to CDs and on to electronic formats The quest for better sound has certainly driven technological change but according to David L Morton so have business strategies patent battles and a host of other factors
