Economics of Development A.P. Thirlwall, Penélope Pacheco-López, 2017-09-16 This classic bestselling textbook provides a comprehensive introduction to the field of development economics. The 10th edition of Tony Thirlwall's book, now co-written with Penélope Pacheco López, provides a clear, comprehensive and rigorous introduction to the theory of development economics and the experience of developing countries. Balancing a historic approach with current data and references, it provides a wide-ranging analysis of the subject. This all-inclusive methodology succeeds at representing different schools of thought with a balance of micro and macro topics. An ideal textbook for undergraduate students of economics and other social sciences, it is also suitable for upper undergraduate and master's level modules on development economics as an option on a non-economics degree. New to this Edition: A brand new chapter on human capital, education, nutrition, health, and the role of women in development. New material on the Sustainable Development Goals, the measurement of poverty, and the multidimensional poverty index. Discussion of randomized control trials. The role of structural change in economic development. New IMF lending facilities.

Development Economics Debraj Ray, 1998-01-12 A landmark textbook on development economics. The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the recent huge strides made in the subject. *Development Economics* does precisely that in a clear, rigorous and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty, and undernutrition; population growth; trade policy and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors among them—the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance—consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. *Development Economics* will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy makers who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.
