K. Lee, David Minard, 2013-09-11 Physiology Environment and Man is based on a symposium conducted by the National Academy of Sciences National Research Council August 1966 While one might expect a textbook to present its field in organized and comprehensive fashion a symposium necessarily follows more of an illustrative pattern according to the personal interests or even idiosyncrasies of the participants It is interesting to note that in spite of these limitations the presentations did in fact cover the range of physiological concerns with environmental effects from the genetic to the temporal and from the molecular to the holistic The book opens with a discussion of the National Academy of Sciences National Research Council s broad based critical study of the physiological underpinning of current concepts of biological responses to toxic chemicals and physical stresses Subsequent chapters deal with topics such as the metabolic fate of common environmental agents growth and trophic factors in carcinogenesis environmental factors in aging and mortality adaptation to heat and cold and the definition of an optimum environment [Interdisciplinary Concepts in Cardiovascular Health](#) Ichiro Wakabayashi, Klaus Groschner, 2013-08-15 This book provides an introduction to the principles of both cardiovascular epidemiology and molecular pathophysiology as a unique aspect it also outlines and discusses the molecular concepts underlying epidemiological observations This first volume is focused on the genetic and molecular basis of pathogenesis and the role of environmental factors triggering cardiovascular dysfunctions The book promotes the use of interdisciplinary approaches in the field of preventive medicine based on recent advances in molecular and cellular pathophysiology The book offers a valuable resource for researchers in basic biomedical fields and clinical scientists alike as well as guidelines for novel avenues of research in both basic pathophysiology and cardiovascular therapy and prevention [Nonlinear Phenomena in Mathematical Sciences](#) V.
