Tissue Interactions in Carcinogenesis D. Tarin,1972-01-01 **Tissue Interactions in Carcinogenesis, Edited by D. Tarin** D. Tarin,1972 **Toxicological Evaluation of Chemical Interactions** ,1994 Cancer Drug Delivery Systems Based on the Tumor Microenvironment Yasuhiro Matsumura,David Tarin,2020-01-07 This book proposes the importance of new systems of drug design and delivery based on cancer pathophysiology in addition to cancer molecular and cellular biology The current studies based on molecular and cellular biology while ignoring pathophysiology and pharmacology may be leading the development of antitumor drugs in the wrong direction and wasting a lot of money Although there have been numerous reports of genetic and phenotypic changes in tumors a large body of pathological and clinical evidence supports the conclusion that there are no pivotal changes in tumor cells that distinguish them consistently and reliably from normal dividing cells Unlike using antibiotics against bacterial infection therefore anticancer agents ACAs need to be delivered selectively to tumor tissues and should be kept there long enough to reproduce the concentrations they reach in the Petri dish which is a closed space where the cytotoxic effects of any anticancer agents ACAs including molecular targeting agents are very strong In the body however administered ACAs are cleared with the passage of time Furthermore most human cancers possess abundant stroma that hinders the penetration of drugs into the tumor microenvironment Therefore to overcome these difficulties novel drug delivery systems have been designed such as nanoparticles and ACA conjugated antibodies to stromal components and to cancer cell surface antigens These advances are described in this book after the first section which describes core features of the pathophysiology of the cancer microenvironment on which these new developments are based **Understanding Cancer** David Tarin,2023-02-02 This book provides a unique wide ranging description of the phenomenon of cancer and its pathological effects in diverse species including humans domesticated and wild animals invertebrates and plants The broad scope of information presented is used to construct radical new insights into biological self regulation and explain their relevance to its disruption by cancerous growth and spread within the human body Mechanisms of action of carcinogenic agents initiation progression metastasis inappropriate gene expression dormancy latency regression and reasons for susceptibility and or resistance to cancer are all considered Also discussed are criteria for pathological diagnosis advances in treatment implications for public health and pitfalls in diagnosis and interpretation of experimental results The book describes operational mechanisms of cancer at the levels of whole individual organ tissue cell molecular and even atomic quantum scales of structural and physiological order Evidence is assembled from all these levels of organization to show that cancer is a dynamically changing disorder and that it is an inherent and perpetual risk of multicellular composition This provides pragmatic new biological and clinical perspectives on malignant neoplasia The biological insight is that it is a consequence of progressing miscommunication within a cellular society The clinical perspective is realistic but optimistic in reasoning that although cancer can never be completely eradicated from human life

because it is a disorder of our intrinsic biological constitution it can be controlled and ameliorated and even cured in a proportion of individuals The text is profusely illustrated with over 300 macroscopic and microscopic pictures It will stimulate curiosity and interest specialists as well as beginners in many scientific disciplines and provides copious references to the medical and scientific literature supporting its conclusions Readers from fields as diverse as medicine pathology veterinary sciences cell biology molecular biology developmental biology and epidemiology will find the information the book contains thought provoking interesting and useful Additionally specialists in occupational and environmental health and legal experts focusing on exposure to carcinogenic materials and pollution will find the contents valuable and informative
