Vegetation Ecology Eddy van der Maarel, 2009-04-01 **Vegetation Ecology** is a comprehensive account of plant communities and their environments. Written by leading experts in their field from four continents, this up-to-date, innovative text covers the composition, structure, ecology, diversity, distribution, and dynamics of plant communities with an emphasis on functional adaptations to the abiotic and biotic processes governing plant communities, reviews the modern developments in vegetation ecology in a historical perspective, presents a coherent view on vegetation ecology while integrating population ecology, dispersal biology, biotic interactions, herbivory, interactions with soil organisms, and ecosystem ecology, and tackles applied aspects of vegetation ecology, notably nature management, restoration ecology, and global change studies. Aimed at advanced undergraduates, graduates, and researchers in plant ecology, geography, forestry, and nature conservation, **Vegetation Ecology** takes an integrated multidisciplinary approach and will be welcomed as an essential reference for plant ecologists the world over.

Data Analysis in Vegetation Ecology Otto Wildi, 2013-04-01 The first edition of **Data Analysis in Vegetation Ecology** provided an accessible and thorough resource for evaluating plant ecology data based on the author's extensive experience of research and analysis in this field. Now the Second Edition expands on this by not only describing how to analyse data but also enabling readers to follow the step-by-step case studies themselves using the freely available statistical package R. The addition of R in this new edition has allowed coverage of additional methods for classification and ordination, and also logistic regression, GLMs, GAMs, regression trees, as well as multinomial regression to simulate vegetation types. A package of statistical functions specifically written for the book covers topics not found elsewhere, such as analysis and plot routines for handling synoptic tables. All data sets presented in the book are now also part of the R package *dave*, which is freely available online at the R Archive webpage. The book and data analysis tools

combined provide a complete and comprehensive guide to carrying out data analysis students researchers and practitioners in vegetation science and plant ecology Summary A completely revised and updated edition of this popular introduction to data analysis in vegetation ecology Now includes practical examples using the freely available statistical package R Written by a world renowned expert in the field Complex concepts and operations are explained using clear illustrations and case studies relating to real world phenomena Highlights both the potential and limitations of the methods used and the final interpretations Gives suggestions on the use of the most widely used statistical software in vegetation ecology and how to start analysing data Praise for the first edition This book will be a valuable addition to the shelves of early postgraduate candidates and postdoctoral researchers Through the excellent background material and use of real world examples Wildi has taken the fear out of trying to understand these much needed data analysis techniques in vegetation ecology Austral Ecology *Vegetation Ecology of Central Europe* Heinz Ellenberg,1988-07-29 No other book discusses so many principles relevant not only to plant ecologists in continental Europe but in the British Isles and North America **Aims and Methods of Vegetation Ecology** Dieter Mueller-Dombois,Heinz Ellenberg,1974 Written 30 years ago as the first synthesis of European and Anglo American methods in vegetation ecology this text remains as current and topical today as it was a quarter of a century ago because the progress that has been made in vegetation science is in the computer based treatment of sample data not in the creation of new sampling protocols **The Study of Plant Communities** Henry John Oosting,1956 Resource added for the Landscape Horticulture Technician program 100014 **Ecology of World Vegetation** O.W.
