Hands-On C++ Game Animation Programming Gabor Szauer, 2020-06-12 Learn animation programming from first principles and implement modern animation techniques that can be integrated into any game development workflow Key Features Build a functional and production ready modern animation system with complete features using C Learn basic advanced and skinned animation programming with this step by step guide Discover the math required to implement cutting edge animation techniques such as inverse kinematics and dual quaternions Book Description Animation is one of the most important parts of any game Modern animation systems work directly with track driven animation and provide support for advanced techniques such as inverse kinematics IK blend trees and dual quaternion skinning This book will walk you through everything you need to get an optimized production ready animation system up and running and contains all the code required to build the animation system You ll start by learning the basic principles and then delve into the core topics of animation programming by building a curve based skinned animation system You ll implement different skinning techniques and explore advanced animation topics such as IK animation blending dual quaternion skinning and crowd rendering The animation system you will build following this book can be easily integrated into your next game development project The book is intended to be read from start to finish although each chapter is self contained and can be read independently as well By the end of this book you ll have implemented a modern animation system and got to grips with optimization concepts and advanced animation techniques What you will learn Get the hang of 3D vectors matrices and transforms and their use in game development Discover various techniques to smoothly blend animations Get to grips with GLTF file format and its design decisions and data structures Design an animation system by using animation tracks and implementing skinning Optimize various aspects of animation systems such as skinned meshes clip sampling and pose palettes Implement the IK technique for your game characters using CCD and FABRIK solvers Understand dual quaternion skinning and how to render large instanced crowds Who this book is for This book is for professional independent and hobbyist developers interested in building a robust animation system from the ground up Some knowledge of the C programming language will be helpful

Human Motion Bodo Rosenhahn, Reinhard Klette, Dimitris Metaxas, 2007-10-24 Edward Muybridge 1830 1904 is known as the pioneer in motion capturing with his famous experiments in 1878 called Animal Locomotion Since then the field of animal or human motion analysis has grown in many directions However research and results that involve human like animation and the recovery of motion is still far from being satisfactory The modelling tracking and understanding of human motion based on video sequences as a research field has increased in importance particularly in the last decade with the emergence of applications in sport sciences medicine biomechanics animation online games surveillance and security Progress in human motion analysis depends on empirically anchored and grounded research in computer vision

computer graphics and biomechanics Though these elds of research are often treated separately human motion analysis requires the integration of methodologies from computer vision and computer graphics Furthermore the understanding and use of biomechanics constraints improves the robustness of such an approach This book is based on a June 2006 workshop held in Dagstuhl Germany This workshop brought together for the rst time researchers from the aforementioned disciplines Based on their diverse perspectives these researchers have been developing new methodologies and contributing through their ings to the domain of human motion analysis The interdisciplinary character of the workshop allowed people to present a wide range of approaches that helped stimulate intellectual discussions and the exchange of new ideas
