

# WHY 3 BAND IS BETTER

The iProtect 1216 is a professional RF detector created for discovering all types of RF eavesdropping devices, including analog and digital, as well as those that transmit information over mobile networks and using wireless standards.

The frequency range of the 1216 has been split into 3 parts, each displayed by a separate bargraph: **VHF/UHF 50-700 MHz**; **Mobile and wireless 700 MHz – 3 GHz**; and **Microwave and wireless 3-12 GHz**. The separate indication allows the operator to better understand what type of signal is detected, to detect several signals at the same time and to sustain the ability of detection near the sources of interference.
