The Future of Land Warfare Michael E. O'Hanlon, 2015-08-31 What happens if we bet too heavily on unmanned systems cyber warfare and special operations in our defense In today's U.S. defense policy debates big land wars are out Drones cyber weapons special forces and space weapons are in Accordingly Pentagon budget cuts have honed in on the army and ground forces this after the long wars in Iraq and Afghanistan seems like an appealing idea No one really wants American boots on the ground in bloody conflicts abroad But it is not so easy to simply declare an end to messy land wars A survey of the world's trouble spots suggests that land warfare has more of a future than many now seem to believe In *The Future of Land Warfare* Michael O'Hanlon offers an analysis of the future of the world's ground forces Where are large scale conflicts or other catastrophes most plausible Which of these could be important enough to require the option of a U.S. military response And which of these could in turn demand significant numbers of American ground forces in their resolution O'Hanlon is not predicting or advocating big American roles in such operations only cautioning against overconfidence that we can and will avoid them O'Hanlon considers a number of illustrative scenarios in which large conventional forces may be necessary discouraging Russia from even contemplating attacks against the Baltic states discouraging China from considering an unfriendly future role on the Korean peninsula handling an asymmetric threat in the South China Sea with the construction and protection of a number of bases in the Philippines and elsewhere managing the aftermath of a major and complex humanitarian disaster superimposed on a security crisis perhaps in South Asia coping with a severe Ebola outbreak not in the small states of West Africa but in Nigeria at the same time that country falls further into violence addressing a further meltdown in security conditions in Central America

P. K. Chakravorty, 2020 The book deals with the future of land warfare on the Indian subcontinent To predict the future is extremely difficult particularly in the field of Warfare This is due to the fact that wars are impacted by doctrine technology and people Also the introduction of nuclear weapons has made war less frequent and reduced the duration There are trends which keep changing with the passage of time Conflicts in the 21st century are short and swift with a combination of effects Further aspirations of leaders often point towards different military objectives In such a scenario we could plan at best for a decade and maybe visualise for about 15 years By and large wars of the future will be conventional hybrid and would be interstate or with non state actors The causes could be territorial or related to historical differences ideological biases economic disparity security and water distribution Further issues could exacerbate due to impact of climate change higher rate of population growth of minorities and sectarian or ethnic extremism The future wars are likely to follow three

types It could be overt covert and finally outsourced The future battle space as visualised in the next 15 years would have characteristics which would make it non linear in time and space Unlike wars of the past they would be swift and would be based on speed Targets would need to be precisely engaged to avoid collateral damage Operations would demand jointness between the three services Further they would be continuous with no pauses They could be termed as 24x7 operations In these operations connectivity would play an important part and communications would be available to soldiers commanders and autonomous weapon systems and vehicles There would be a need for synergy between air sea and outer space while undertaking land warfare Perception management becomes extremely important as this alone would lead to an effective reorganisation of people Finally technology would play an important role particularly the application of artificial intelligence

International politics have become ever more volatile over the last decade increasing the risk of large scale military violence Yet the precise character of future war will depend on a range of factors that relate to adversaries allies technology geographical scope and multiple domains of warfighting Few would question that land forces will be important also in the foreseeable future However given that the battlefield is in a state of transformation so is the mission purpose and utilization of land forces Indeed the future conduct of land warfare is subjected to serious and important questions in the face of large and complex challenges and security threats Advanced Land Warfare explores the evolving role of land forces paying particular attention to the changes that have taken place in the art of commanding and executing combat as well as the role of rapid technological innovation and information dissemination in shaping warfare The book provides insights into key contemporary developments in land warfare and presents case studies on land tactics and operations in different national contexts drawing on the best of theory practice and professional experience and featuring chapters written by leading international scholars and practitioners Relating to the realities of the modern battlefield the book addresses a number of critical questions about land tactics and operations combining a conceptual basis with empirical examples of tactical thinking and practice and emphasising the importance of understanding the perspectives of various national armies in order to provide a current understanding of the central issues of land warfare An open access title available under the terms of a CC BY NC ND 4 0 International licence
