In fact, ICN2005 was very well perceived by the international networking community. A total of 651 papers from more than 60 countries were submitted from which 238 were accepted. Each paper was reviewed by several members of the Technical Program Committee. This year the Advisory Committee revalidated various accepted papers after the reviews had been incorporated. We perceived a significant improvement in the number of submissions and the quality of the submissions. The ICN2005 program covered a variety of research topics that are of current interest, starting with Grid networks, multicasting, TCP optimizations, QoS and security, emergency services and network resiliency. The Program Committee selected also three tutorials and invited speakers that addressed the latest search results from the international industries and academia and reports on findings from mobile satellite and personal communications related to 3rd and 4th generation research projects and standardization.

DiIorio, 1991 Intended for use as a core text or to supplement any introductory or intermediate level statistics course, this book presents the basics of the SAS system in a well-paced, structured, non-threatening manner. It provides an introduction to the SAS system for data management, analysis and reporting using the subset of the language ideally suited for beginning students while at the same time serving as a useful reference for intermediate or advanced users. Students learn the language's power and flexibility with many real-world examples drawn from the author's industry experience. Beginning with an overview of the system, this text shows students how to read data, perform simple analyses and produce simple reports. More complex topics are carefully introduced, guiding students to manage multiple datasets and write custom reports. More advanced statistical techniques such as correlation, regression and analysis of variance are presented in later chapters.
