Conlon, Michael L. Nicholson, Steven Schwab, 2000 This book describes the current status of vascular access for patients with end stage renal failure who require dialysis The book highlights controversial areas and problems and describes differences in practice in USA and Europe Vascular Access is the Achilles heel of dialysis In the United States and Europe in 1999 there were in access of 400 000 patients maintained on dialysis The success of this life sustaining procedure is dependant on being able to successfully access the circulation and obtain blood flows of between two and five hundred mls per minute three times a week In 1964 Cimino and Brescia described what remains today the premier form of vascular access Not long after the development of the Cimino Brescia fistula it became apparent that there were patients in whom it was either impossible or extremely difficult to create an adequate fistula for dialysis As dialysis technology has been applied to older and sicker patients this trend has continued such that in the United States the majority of patients starting dialysis do not have a primary fistula The maintenance of long term vascular access in patients who do not have a primary fistula requires considerably increased effort In recent years a number of innovations have considerably increased the success of long term vascular access in these patients This book brings together these developments including strategies to prospectively detect impending vascular access failure and strategies to pre emptively prevent graft failure Simultaneously with these developments there have been dramatic improvements in our understanding of the pathophysiology of graft failure this improved understanding of the

biology of access failure are beginning to bring to the clinical arena newer strategies to delay graft failure

Vessel Health and Preservation: The Right Approach for Vascular Access Nancy L. Moureau,2024-12-28 This second edition offers updated and revised information on vessel health and preservation VHP It presents a model of care and systematic application of vascular access and administration of intravenous treatment to show how establishing and maintaining a route to the bloodstream with optimal methods is essential for patients in acute care today This model concept was first published in

poster form in 2008 and in JVA in 2012 which has received a great deal of attention especially in the US UK and Australia Until now little thought has been given to an intentional process to guide selection insertion and management of vascular access devices VADs and by default actions are based on crisis management when a quickly selected VAD fails The book details how VHP establishes a framework or pathway model for each step of the patient experience intentionally guiding improving and eliminating risk when possible The evidence points to the fact that reducing fragmentation establishing a pathway and teaching the process to all stakeholders reduces complications with intravenous therapy improves efficiency and diminishes cost As such this book has become a strong point of reference appealing to vascular access specialists bedside nurses physicians and other health professionals Few authoritative guides provide the depth and descriptive evidence included in this VHP model of care suitable for hospital administrators directors educators and others to apply within their services

Intravenous Therapy in Nursing Practice Lisa Dougherty, Julie Lamb, 2009-03-17 Intravenous Therapy in Nursing Practice provides a comprehensive guide to the management of intravenous therapy in nursing and explores all aspects of intravenous therapy in both hospital and community settings It addresses core clinical skills including the preparation and administration of intravenous drugs peripheral venous access acute and long term central venous access and paediatric intravenous therapy The book also explores relevant anatomy and physiology fluid and electrolyte balance pharmacological aspects and legal and ethical issues in order to equip nurses with the skills and knowledge needed in order to provide safe and effective care Addresses key specialist skills including blood transfusion parenteral nutrition and safe administration of cytotoxic drugs A definitive text for nurses working in the hospital and the community Contains contributions from leading nurse practitioners Intravenous Therapy in Nursing Practice is an essential resource for nurses and health professionals working in intravenous therapy

Vascular Access Device Policy Standardization in a Hospital System Jennifer Teerlink, 2022 Lack of standardization in vascular access device management policies can increase nursing care variability increasing catheter occlusion rates Catheter occlusions can delay treatments and may increase the risk of further complications for patients increasing costs Purpose This quality improvement project aimed to standardize a hospital systems vascular access device policy and nurse driven flushing and maintenance protocol Methodology A routine audit of an electronic policy system identified over 50 vascular access device care and management policies in 11 hospitals These policies included outdated procedural steps rather than directing nurses to one

evidence based clinical practice guideline when performing clinical skills One policy was developed following evidence based clinical practice guidelines and all hospitals were asked to retire their existing policies to follow a standardized approach Results Each of the 11 hospitals adopted a standardized policy Survey results of nurses indicated n 189 an educational gap in the awareness and use of one evidence based clinical practice guideline when performing vascular access device care and maintenance which may have led to increased occlusions After the policy intervention the doses of alteplase used for occluded catheters decreased Implications for Practice Standardizing policy and directing nurses to one evidence based clinical practice guideline reduces nursing practice variability and decreases catheter occlusion rates Nurse education is crucial to change practice and direct nurses to their correct resources when performing nursing skills

Directory of Clinical Practice Guidelines, 1988 American Medical Association, 1998-06 This resource offers a convenient way to locate practice guidelines in practically any clinical area This edition provides a comprehensive bibliographic listing of more than 1 900 guidelines standards and other practice management strategies including several hundred new guidelines indexed by subject title and sponsoring organization Each entry provides pricing and order information Also included is a mid year update with newly developed practice guidelines those under development and those recently withdrawn
