Thoth System Multi Process Structuring And Portability:

The Thoth System David R. Cheriton,1982 This book describes the design of the Thoth the techniques used for multi process structing and portability and the experience derived from this experiment Preface **Parallel Processing and Medium-scale Multiprocessors** Arthur Wouk,1989-01-01 Mathematics of Computing Parallelism **Catalogue of Distributed File/Operating Systems** Uwe M. Borghoff,2012-12-06 In general distributed systems can be classified into Distributed File Systems DFS and Distributed Operating Systems DOS The survey which follows distinguishes between DFS approaches in Chapters 2 3 and DOS approaches in Chapters 4 5 Within DFS and DOS I further distinguish traditional and object oriented approaches A traditional approach is one where processes are the active components in the systems and where the name space is hierarchically organized In a centralized environment UNIX would be a good example of a traditional approach On the other hand an object oriented approach deals with objects in which all information is encapsulated Some systems of importance do not fit into the DFS DOS classification I call these systems closely related and put them into Chapter 6 Chapter 7 contains a table of comparison This table gives a lucid overview summarizing the information provided and allowing for quick access The last chapter is added for the sake of completeness It contains very brief descriptions of other related systems These systems are of minor interest or do not provide transparency at all Sometimes I had to assign a system to this chapter simply for lack of adequate information about it Kommunikation in Verteilten Systemen Nina Gerner,Otto Spaniol,2012-12-06 *Hector* G. Krüger,G. Müller,2012-12-06 The present volume and volume I Hector New Ways in Education and Research present the results of HECTOR the four year cooperation project between the Univer sity of Karlsruhe and IBM Germany represented by the European Networking Center and Scientific Center in Heidelberg as well as IBM Research in Riischlikon The pro ject was started in spring 1984 and will end in April 1988 with a congress This congress addresses the scientific community to present experiences and results with a program of lectures and demonstrations The HECTOR Project has two major aspects the first is to explore new ways in uni versity education The second aspect of HECTOR comprises basic research work to develop new technological concepts for the establishment of computer communication networks supporting academic research and education in all disciplines The underlying concept is that now and in the future computer software and commu nication systems which are required for the broad range of scientific and educational tasks will be of different technical orientation and made by different manufacturers These diverse systems will however need to coexist and cooperate side by side Today in most cases different hardware and software architectures of different manu facturers prevent a scientist or student from choosing freely the computer and software which offers the best alternative for solving his or her current problem The mutual cooperation of the academic users is also hindered substantially by the many incompa tibilities present The users future is therefore transparency in a heterogeneous envi ronment Software Kim W.
