Used Machinery and Economic Development Dilmus D. James,1974 Monograph on the potential role of second hand equipment in economic development of developing countries covers choice of technology maintenance and equipment cost considerations the evaluation of social costs and benefits of used machinery supply and other aspects of the used machinery market etc Bibliography pp 197 to 206 references and statistical tables *The Economic Feasibility of Employing Used Machinery in Less Developed Countries* Dilmus D. James,1970 *Transnational Corporations and Economic Development* Sanjaya Lall,1993 **The Economic Development of Continental Europe 1780-1870** Alan Milward,S. B.

Saul,2013-05-13 Upon its initial publication in 1973 this was the first textbook to present a unified view and comprehensive treatment of the economic development of Europe from a continental rather than a British perspective At the same time it is more than mere textbook it is an interpretive analysis of a wide range of research on the subject in many countries which explores the objective validity of earlier theories and provides an ideal starting point for further research into economic development and European history The work deals mainly with Western Europe but in principally studying both France and Germany up to 1870 the authors by no means neglect the smaller countries Indeed the work is unusual in dealing fully with the Scandinavian countries and others such as Switzerland and Belgium This is a reissue of the fully revised and corrected second edition of the work first published in 1979 *Economic Growth And Development (Third Edition)* Hendrik Van Den Berg,2016-09-02 This textbook covers the full range of topics and issues normally included in a course on economic growth and development Both mainstream economic perspectives as well as the multi paradigmatic inter disciplinary and dynamic evolutionary perspectives from heterodox economics are detailed Economic development is viewed in terms of the long run well being of humanity social stability environmental sustainability and just distribution of economic gains not simply as the growth of GDP Furthermore this textbook explicitly recognizes the complexity of economic development by linking economic activity to our broader social and natural environments The textbook s unique feature is its focus on the natural environment Both the historical effects of economic development on the environment and the environmental constraints on future economic development are thoroughly discussed in two chapters on environmental issues and policies In fact because economic development is defined in terms of economic social and environmental sustainability the natural environment is included in discussions throughout the book The textbook is inter disciplinary knowledge from fields such as sociology psychology political science economic history and ecology is called on to enhance the economic analysis A thorough historical account of the development of the principal paradigms of economic development is also included and the important issues of institutional development and cultural change merit their own chapters Two chapters on technological change holistically focus on production technologies as well as the dynamic performance of entire economic social and ecological systems Also the important relationship between economic development and globalization is presented in three chapters on international

trade international finance and investment and immigration from both orthodox and heterodox perspectives

Bulletin* American Engineering Council,1922 **Economic and Social Problems of the Machine Age** Arthur Bruce Anthony,1930 **Russian Economic Development Since the Revolution** Maurice Dobb,Henry Charles Stevens,1929 The story of the economic development of the Soviet Union provided the first case in history of the establishment of a socialist economy and was therefore of great interest for economists and economic historians of the twentieth century At the same time it affords a unique example of the transformation of a country into an industrial nation at an unprecedented pace and under the guidance of a national economic plan This book examines these changes from the Russian Revolution of 1917 to 1927
