These papers address a broad spectrum of problems and ideas related to dynamic modelling of information systems About half of the included papers present formal schemata for the specification of dynamic models of information systems Petri nets and other techniques are used to devise generalizable formal constructs for representing information systems with dynamic properties Other papers present results from experience using dynamic models in the actual design of information systems Simulation techniques including animation are an important feature of many of these applied papers *Systems Analysis and Design Methods* Jeffrey L. Smith,1986 **Information System Development Process** Naveen Prakash,Colette Rolland,Barbara Pernici,1993 This volume aims to pave the way to a greater understanding of the information system development process Traditionally information systems have been perceived as a slice of real world history This has led to a strong emphasis on the development of conceptual models the requirements specifications of which can readily be expressed However the route to

such an expression or the process of development has not received any substantial attention It is now agreed that a study of the development process affords notable benefits Firstly it helps to create an understanding of what a realistic development process is and how it proceeds from an initial specification to its acceptable representation Secondly the nature of guidance that can be provided by the next generation of CASE tools can be substantially improved It can be expected that these tools will cease to be mere drafting aids and consistency checking programs Instead it is likely that they will provide a procreative environment in which the development engineer will play an important role This tool user symbiosis should have a beneficial impact on both the productivity of the developer and on the quality of the product In bringing together researchers and practitioners from such diverse areas as AI Software Engineering Decision Support and Information Systems it is hoped this publication will take the quest to comprehend information system development processes a significant step forwards
