**Neutrosophic Soft Rough Topology and its Applications to Multi-Criteria Decision-Making** Muhammad Riaz ,Florentin Smarandache, Faruk Karaaslan, Masooma Raza Hashmi, Iqra Nawaz, In this manuscript we introduce the notion of neutrosophic soft rough topology NSR topology defined on neutrosophic soft rough set NSR set We define certain properties of NSR topology including NSR interior NSR closure NSR exterior NSR neighborhood NSR limit point and NSR bases Furthermore we aim to develop some multi criteria decision making MCDM methods based on NSR set and NSR topology to deal with ambiguities in the real world problems For this purpose we establish algorithm 1 for suitable brand selection and algorithm 2 to determinen core issues to control crime rate based on NSR lower approximations NSR upper approximations matrices core and NSR topology

Application in Decision Making Majdoleen Abu Qamar, Nasruddin Hassan, A neutrosophic set was proposed as an approach to study neutral uncertain information It is characterized through three memberships T I and F such that these independent functions stand for the truth indeterminate and false membership degrees of an object The neutrosophic set presents a symmetric form since truth enrolment T is symmetric to its opposite false enrolment F with respect to indeterminacy enrolment I that acts as an axis of symmetry

**An Application of Neutrosophic Sets to Decision Making** Michael Gr. Voskoglou, 2023-01-01 Frequently in real life situations decision making takes place under fuzzy conditions because the corresponding goals and or the existing constraints are not clearly defined Maji et al introduced in 2002 a method of parametric decision making using soft sets as tools and representing their tabular form as a binary matrix As we explain here however in cases where some or all of the parameters used for the characterization of the elements of the universal set are of fuzzy texture their method does not give always the best decision making solution In order to tackle this problem we modified in earlier works the method of Maji et al by replacing the binary elements in the tabular form of the corresponding soft set either by grey numbers or by triangular fuzzy numbers In this work in order to tackle more efficiently cases in which the decision maker has doubts even about the correctness of the fuzzy qualitative characterizations assigned to some or all of the elements of the universal set we replace the binary elements of the tabular form by neutrosophic triplets Our new neutrosophic decision making method is illustrated by an application concerning the choice of a new player by a soccer club
