What Computing Is All About:

What Computing Is All About Jan L.A.van de Snepscheut,2012-12-06 I have always been fascinated with engineering From Roman bridges and jumbo jets to steam engines and CD players it is the privilege of the engineer to combine scientific insights and technical possibilities into useful and elegant products Engineers get a great deal of satisfaction from the usefulness and beauty of their designs Some of these designs have a major impact on our daily lives others enable further scientific insights or shift limits of technology The successful engineer is familiar with the scientific basis of the field and the technology of the components and has an eye for the envisioned applications For example to build an airplane one had better understand the physics of motion the structural properties of aluminum and the size of passengers And the physics of motion requires a mastery of mathematics in particular calculus Computers are a marvel of modern engineering They come in a wide variety and their range of applications seems endless One of the characteristics that makes computers different from other engineering products is their programmability Dishwashers have some limited programming capability but it is not the key part of the device Their essential part is some bility but it enclosed space where the dishes are stored and flushed with hot water Computers are embedded in many different environments but in their case the programming capability is the essential part All computers are programmed in more or less the same way *What is Cloud Computing? A Brief History of Computing Gerard O'Regan,2008-02-01 Overview The objective of this book is to provide an introduction into some of the key topics in the history of computing The computing field is a vast area and a truly comprehensive account of its history would require several volumes The aims of this book are more modest and its goals are to give the reader a flavour of some of the key topics and events in the history of computing It is hoped that this will stimulate the interested reader to study the more advanced books and articles available The history of computing has its origins in the dawn of civilization Early hunter gatherer societies needed to be able to perform elementary calculations such as counting and arithmetic As societies evolved into towns and communities there was a need for more sophisticated calculations This included primitive accounting to determine the appropriate taxation to be levied as well as the development of geometry to enable buildings templates and bridges to be constructed Our account commences with the contributions of the Egyptians and Babylonians It moves on to the foundational work done by Boole and Babbage in the nineteenth century and to the important work on Boolean Logic and circuit design done by Claude Shannon in the 1930s The theoretical work

done by Turing on computability is considered as well as work done by von Neumann and others on the fundamental architecture for computers [Poor's Manual of Industrials; Manufacturing, Mining and Miscellaneous Companies](#) ,1916
