Smart Cities Policies and Financing John R. Vacca, 2022-01-19

Smart Cities Policies and Financing Approaches and Solutions is the definitive professional reference for harnessing the full potential of policy making and financial planning in smart cities. It covers the effective tools for capturing the dynamic relations between people, policies, financing, and environments and where they are most often useful and effective for all relevant stakeholders. The book examines the key role of science, technology, and innovation (STI) especially in information and communications technologies in the design, development, and management of smart cities, policies, and financing. It identifies the problems and offers practical solutions in implementation of smart infrastructure, policies, and financing.

Smart Cities Policies and Financing is also about how the implementation of smart infrastructure projects related to the challenges of the lack of financing and the application of suitable policies underlines the key roles of science, technology, and innovation (STI) communities in addressing these challenges and provides key policies and financing that will help guide the design and development of smart cities. Brings together experts from academia, government, and industry to offer state-of-the-art solutions for improving the lives of billions of people in cities around the globe. Creates awareness among governments of the various policy tools available such as output-based contracting, public-private partnerships, procurement policies, long-term contracting, and targeted research funds in order to promote smart infrastructure implementation and encouraging the use of such tools to shape markets for smart infrastructure and correct market failures. Ensures the inclusiveness of smart city projects by adequately addressing the special needs of marginalized sections of society including the elderly, persons with disabilities, and inhabitants of informal settlements and informal sectors. Ensures gender considerations in the design of smart cities and infrastructure through the use of data generated by smart systems to make cities safer and more responsive to the needs of women. Demonstrate practical implementation through real-life case studies. Enhances reader comprehension using learning aids such as hands-on exercises, checklists, chapter summaries, review questions, and an extensive appendix of additional resources.

Production Research 1993 V. Orpana, A. Lukka, 1993

Research into industrial production is a varied and far-reaching activity and cannot be said to be the province of any one particular science. Industrial production research is a subject which cannot be covered in any one or even several branches of study. Expertise in other fields of science is also needed for this research. The guiding principle on which industrial production is based is to manufacture marketable quality products using the factors of production as economically

as possible Only in this way can profitability be assured and future production be guaranteed Industrial centres have sprung up throughout the world in which the latest technological achievements have been applied with great success The 322 papers in this volume review current issues of production in an increasingly demanding working environment Current problems are analysed which can only be solved through worldwide production research which will also further industrial development The effects of both industrial production and the production of energy on the natural environment are examined in detail The articles presented in this book emphasise the need for flexibility and concentration of forces in production research in order to propose and implement approaches and solutions which can be adapted to continuously changing circumstances It is hoped that the readers of this volume will consider production research as an ongoing and open project which requires multidisciplinary cooperation to cope with the many open questions on future industrial development throughout the world
