[A Stargazing Program for Beginners](#) Jamie Carter, 2015-11-20. Sets out a simple month-by-month program to reveal all of the night sky's biggest and most beautiful secrets in just one year, and with only a few hours of stargazing each month. By investing just an hour a week and 50 in binoculars, it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns and what they tell us about Earth, the seasons, and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12-month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey, he learns about the celestial mechanics at work in the skies above that are to the beginner almost beyond belief. As well as the vital constellations and clusters and the weird and wonderful nebulas, he searches out dark sky destinations across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey, he witnesses a solar eclipse and grapples with star charts, binoculars, smartphone apps, telescopes, spots, satellites, and attempts basic astro photography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are, and even where the Galactic Center Point is.
