Technology In The Policy Process:

Science, Technology, And Policy Decisions Anne L. Hiskes, Richard P. Hiskes, 2019-07-09 This text written by a philosopher of science and a political theorist introduces students to the issues and controversies surrounding science and technology policy in the United States As the impact of technological advancement is increasingly felt the policy making process for science and technology is undergoing a marked transition The making of this policy is no longer solely the function of government agencies and institutions New actors in the policy arena are raising questions about the future of technological advancement in the United States and elsewhere and their voices are affecting sometimes obstructing the traditional policy process This book surveys the entire domain of science and technology policy making with special emphasis on the growing role of citizen participation the ethical issues raised by modern policy problems and the general principles that guide current policy The authors discuss current philosophical views about the nature of science and technology as social and political entities and also consider the history of the relations between these fields and political authority They combine an issues and case study approach with a narrative discussion of how ethical participatory and institutional factors have merged in the policy process Among the topics addressed are nuclear power and siting policy hazardous waste communications technology and biomedical technology After reviewing the difficult problems facing the modern policy maker the authors assess the methods and ethical assumptions of the current policy making framework and consider alternatives that are more sensitive to the complexity of contemporary policy issues Intended as a core text for courses in Science Technology and Public Policy the book can also be used in interdisciplinary courses focusing on the relationship between science technology and society The text is also appropriate for courses in the philosophy of science and technology and for courses in social and political philosophy

Stan Metcalfe,Uwe Cantner,2012-12-06 For as long as one can remember the edifice of the neoclassical economic synthesis has been under attack Critiques have focused on the extreme unreality of the assumptions that underpin the Arrow Debreu theorems of welfare economics They have queried the excessive formalism of the edifice and the lack of practical significance of many of the results They have castigated the neoclassical synthesis for its internal incoherence lacking an independent theory of capital for example one of the favorite topics of the Cambridge school its lack of a dynamic element its non evolutionary character its lack of any conception of market process and so the list could be continued Blaug 1997 Through all this the neoclassical synthesis remains as strong as ever impervious it seems to these or any other attacks In this paper a different tack is taken The neoclassical edifice is left alone standing as a representation of what goes on in a certain kind of economy namely the economy where goods and services are produced and exchanged The paper then introduces another kind of economy namely an economy of productive entities called resources that are needed to produce the economy of goods and services **Communication in Congress** David Whiteman,1995 A powerful defense of original jurisprudence *Management, a Bibliography for NASA Managers* ,1992 California.
