Technology Of Extrusion Cooking:

The Technology of Extrusion Cooking N.D. Frame,2012-12-06 Extrusion cooking is a specialist area of food technology because of the complexity of the interactive effects which are inherent in the system General predictive modelling is very difficult because ingredients are diverse and can vary considerably Modelling tends to be product specific new product development tends to be by experimental designs and good fortune The emphasis of this book is on the latest and potential applications of twin screw extrusion in food production specifically co rotating inter meshing screw extruders Of course in order to develop products and maximise the extruder potential in terms of energy product quality and output an overall understanding of the material flow mechanism barrel fill length and rheology is essential The book aims to give explanations and general guidance with examples of screw design configuration and operating parameters for a variety of product categories It is also intended to help production operators diagnose the symptoms of particular problems such as temperature control quality variation raw material inconsistency etc For the product development technologist there is more than one way to make a similar product For example equipment manufacturers recommend difficult methods for producing flaked corn In addition their machines may differ from each other in terms of screw design power volume ratio screw tip barrel clearance etc making scale up more problematic

Extrusion Cooking R Guy,2001-06-25 Extrusion cooking is an ideal method for manufacturing a number of food products from snacks and breakfast cereals to baby foods However as a complex multivariate process it requires careful control if product quality is to be maintained Edited by a leading authority in the field and with an international team of contributors this important collection reviews the key factors affecting quality and how they can be controlled in manufacturing a range of extruded products The first part of Extrusion Cooking looks at general influences on quality There are chapters on the selection of raw materials criteria for selecting the right extruder analysing and optimising thermal performance in extrusion cooking and effective process control There is also an important chapter on maintaining nutritional quality in extruded products The second part of the book looks at the application of extrusion in particular product groups Each chapter examines the range of extruded products within the product group the specific production issues and future trends It also includes chapters on key products such as breakfast cereals snack foods and baby foods Extrusion cooking will be widely welcomed as a major reference in maximising the quality of extruded products A key reference to improving efficiency and quality on extruded products

Extrusion Processing Technology Jean-Marie Bouvier,Osvaldo H. Campanella,2014-03-31 Extrusion is the operation of forming and shaping a molten or dough like material by forcing it through a restriction or die It is applied and used in many batch and continuous processes However extrusion processing technology relies more on continuous process operations which use screw extruders to handle many process functions such as the transport and compression of particulate components melting of polymers mixing of viscous media heat processing of polymeric and biopolymeric materials product texturization and shaping defibering and chemical impregnation of fibrous materials reactive extrusion and fractionation of solid liquid systems Extrusion processing technology is highly complex and in depth descriptions and discussions are required in order to provide a complete understanding and analysis of this area this book aims to provide readers with these analyses and discussions Extrusion Processing Technology Food and Non Food Biomaterials provides an overview of extrusion processing technology and its established and emerging industrial applications Potency of process intensification and sustainable processing is also discussed and illustrated The book aims to span the gap between the principles of extrusion science and the practical knowledge of operational engineers and technicians The authors bring their research and industrial experience in extrusion processing technology to provide a comprehensive technical yet readable volume that will appeal to readers from both academic and practical backgrounds This book is primarily aimed at scientists and engineers engaged in industry research and teaching activities related to the extrusion processing of foods especially cereals snacks textured and fibrated proteins functional ingredients and instant powders feeds especially aquafeeds and petfoods bioplastics and plastics biosourced chemicals paper pulp and biofuels It will also be of interest to students of food science food engineering and chemical engineering Also available Formulation Engineering of Foods Edited by J E Norton P J Fryer and I T Norton ISBN 978 0 470 67290 7 Food and Industrial Bioproducts and Bioprocessing Edited by N T Dunford ISBN 978 0 8138 2105 4 Handbook of Food Process Design Edited by J Ahmed and M S Rahman ISBN 978 1 4443 3011 3 *Technology of Extrusion Cooking* N.D.
