The Software Encyclopedia ,1997 **Journal of Telecommunication Networks** ,1982 Green Radio Communication Networks Applying Radio-over-Fibre Technology for Wireless Access Mazin Al Noor,2012-07-17 Doctoral Thesis Dissertation from the year 2011 in the subject Engineering Communication Technology grade Pass Middlesex University in London School of Engineering and Information Sciences course PhD language English abstract The all around presence of wireless communication links combined with functions that support mobility will make a roaming person bound communication network possible in the near future This idea of a personal network in which a user has his own communication environment available everywhere The overall aim of this research project was to simulate the transmission wireless and baseband RF signals via fibre for a long distance in high quality consuming a low power budget Therefore this thesis demonstrated a green radio communication network and the advantage of transmitting signals via fibre rather than via air The contributions of this research work were described in the follows Firstly a comparison of the power consumption in WiMAX via air and fibre is presented As shown in the simulation results the power budget for the transmission of 64 QAM WiMAX IEEE 802 16 2005 via air for a distance of 5km lies at 189 67 dB whereas for the transmission via RoF for a distance of 140km the power consumption ranges at 65dB Through the deployment of a triple symmetrical compensator technique consisting of SMF DCF and FBG the transmission distance of the 54 Mbps WiMAX signal can be increased to 410km without increasing the power budget of 65dB An amendment of the triple compensator technique to SMF DCF and CFBG allows a 120Mbps WiMAX signal transmission with a clear RF spectrum of 3 5 GHz and constellation diagram over a fibre length of 792km using a power budget of 192dB Secondly the thesis demonstrates a simulation setup for the deployment of more than one wireless system namely 64 QAM WiMAX IEEE 802 16 2005 and LTE for a data bit rate of 1Gbps via Wavelength Division Multiplexing WDM RoF over a transmission distance of 1800km The RoF system includes two triple symmetrical compensator techniques DCF SMF and CFBG to obtain a large bandwidth power budget of 393 6dB and a high signal quality for the long transmission distance Finally the thesis proposed a

high data bit rate and energy efficient simulation architecture applying a passive optical component for a transmission span up to 600km AGigabit Optical Passive Network GPON based on RoF downlink 2.5 Gbps and uplink 1.25Gbps is employed to carry LTE and WiMAX also 18 digital channels by utilising Coarse Wavelength Division Multiplexing CWDM The setup achieved high data speed a lowpower budget of 151.2dB and an increased service length of up to 600km
