Transputer Apps Systems 95:

Correct Models of Parallel Computing S. Noguchi, Ota Masahiro, 1997 The 21st century will be the age of network computing. Among the many key technologies in this field, parallel computing and networking technology will play very important roles. In this book, emphasis is placed on networking and modeling parallel computing. The topics cover parallel computing algorithms, parallel software, massively parallel computing systems, and related applications. Articles cover parallel computing, networking, and related applications to initiate discussions. Since the appearance of Transputer chip T9000 C104 and standardizations of IEEE1355 Transputer systems, seem to have opened a new interesting area of parallel computing, networking, and many practical applications. Intelligent Image Processing, Data Analysis & Information Retrieval Masoud Mohammadian, 1999 This edited volume is dedicated to the theory and applications of Computational Intelligence techniques for Intelligent Image Processing, Data Analysis, and Information Retrieval. It consists of 52 accepted research papers from the 1999 International Conference on Computational Intelligence for Modeling Control and Automation CIMCA 99. The goal of this conference was to provide a medium for the exchange of ideas between theoreticians and practitioners to address the important issues in computational intelligence for modelling control and automation. The research papers presented in this book cover new techniques and applications in the fields of Image Processing, Computer Vision, Multimedia Systems, Filtering, Classification, Data Analysis, Prediction, Intelligent Database, and Information Retrievals. The Network Designer's Handbook A. M. Jones, 1997 The Network Designer's Handbook will help anyone trapped between limited bandwidth, fault intolerant computer buses, and expensive over-engineered telecommunications technology. It will help anyone looking for new, cost-effective ways to build LAN switches, RAID systems, multimedia servers, or multiprocessors. It will help the small company looking for an edge to break into the market, and the large one looking for ways to improve its margins and boost its market share. This handbook, the result of over six man-years of effort at the PACT Research Institute, provides solid engineering data for the computer systems professional. Four CPU months of system simulation are summarised in an easy-to-read form, allowing the consequences of different design decisions to be simply compared. The Network Designer's Handbook explains the principles of the new generation of small-scale, low-buffer, serial interconnects. Using the specific example of IEEE 1355 1995 links and the STC104 high-valency switch chip, it shows how this technology can provide modular, fault-tolerant, and scalable interconnect. The picture is rounded out with descriptions of network topologies, case studies, and many practical tips.

Communicating Process Architectures 2004 Ian East, J. Martin, Peter H. Welch, 2004 Communicating Process Architecture (CPA) describes an approach to system development that is process-oriented. It makes no great distinction between hardware and software. It has a major root in the theory of Communicating Sequential Processes (CSP). However, the underlying theory is not limited to CSP. The importance of mobility of both channel and process within a network sees integration with ideas from the calculus. Other formalisms are also exploited, such as BSP and MPI. The focus is on sound methods for the engineering of

significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline

Computational Intelligence for Modelling, Control & Automation Masoud Mohammadian,1999 This edited Book is dedicated to the theory and applications of Evolutionary Computation and Fuzzy Logic for Intelligent Control Knowledge Acquisition and Information Retrieval The book consists of 86 selected research papers from the 1999 International Conference on Computational Intelligence for Modelling Control and Automation CIMCA 99 The research papers presented in this book cover new techniques and applications in the following research areas Evolutionary Computation Fuzzy Logic and Expert Systems with their applications for Optimisation Learning Control Scheduling and Multi Criteria Analysis as well as Reliability Assessment Information Retrieval and Knowledge Acquisition

Communicating Process Architectures 2005 J.F. Broenink,H.W. Roebbers,J.P.E. Sunter,2005-09-09 Modern computing systems work when all components are correct by design and can be combined to achieve scalability This publication offers refereed papers covering various aspects such as system design and implementation tools concurrent programming languages libraries and run time kernels and formal methods and applications
