Transputing Numerical Neural:

Transputing in Numerical and Neural Network Applications Gerard Louis Reijns, Jian Luo, 1992 An examination of the use of transputers in numerical computing and neural networks Topics covered include linear systems of equations and programming fluid and molecular dynamics simulation transformations Kalman filtering and general numerical problems Neural networks are discussed in terms of algorithms and simulation

Transputing '91 Peter Welch, Toshiyasu L. Kunii, A. Bakkers, 1991 Transputers constitute a revolutionary category of microprocessors for parallel processing which have become market leaders in 32 bit RISC architectures The wide range of applications has caused a multitude of activities of user groups in all major countries as well as regional activities on four continents For the first time the collaboration of all these user groups has led to the organization of a world conference Transputing 91

Communicating Process Architectures 2004 Ian East, J. Martin, P.H. Welch, 2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the academic and commercial software and

hardware application and infrastructure which reflects the nature of the discipline **Communicating Process Architectures 2000** World Occam and Transputer User Group. Technical Meeting, 2000 *Architectures, Languages and Techniques for Concurrent Systems* World Occam and Transputer User Group. Technical Meeting, 1999 **Abstract Machine Models for Parallel and Distributed Computing** M. Kara, 1996 Parallel Computing Jonathan P. Gray, Fazel Naghdy, 1995 The broadening of interest in parallel computing and transputers is reflected in this book. Topics discussed include concurrent programming, graphics and image processing, parallel applications, robotics and control, and software tools. The book also features a collection of abstracts of poster presentations. **Parallel Programming and Java** World Occam and Transputer User Group. Technical Meeting, 1997 The Network Designer's Handbook Andrew M. Jones, 1997

Parallel Programming of Transputer Based Machines Traian Muntean, 1988 This publication contains papers from the Occam User Group (OUG). The main aim of the OUG is to act as an independent forum for the exchange of ideas, results, and information in research and development of projects in the area of parallel systems design and programming using various communicating processes oriented approaches for transputer based machines. The papers collected in this volume cover topics such as methodology of Occam programming, parallel asynchronous algorithms, control of real parallelisms in highly parallel machines, applications in scientific programming, real time processing, image processing, etc.

Proceedings of the ... Australian Transputer and OCCAM User Group Conference, 1993 *Parallel Processing in Neural Systems and Computers* Rolf Eckmiller, Georg Hartmann, Gert Hauske, 1990 The 119 contributions in this book cover a range of topics including parallel computing, parallel processing in biological neural systems, simulators for artificial neural networks, neural networks for visual and auditory pattern recognition, as well as for motor control, AI, and examples of optical and molecular computing. The book may be regarded as a state of the art report and at the same time as an Interdisciplinary Reference Source for parallel processing. It should catalyze international and interdisciplinary cooperation among computer scientists, neuroscientists, physicists, and engineers in the attempt to decipher parallel information processes in biology, physics, and chemistry. 2 design conceptually similar technical parallel information processors. **Transputer Systems, Ongoing Research** World Occam and Transputer User Group. Technical Meeting, 1992 This volume contains the papers presented at the 15th Technical Meeting of the World Occam and Transputer User Group (WOTUG 15), offering a representation of current work being undertaken in the transputer field. Two invited papers outline the development of systems architecture and programming environments which aim to make the power of the next generation transputers readily available.
