SQL Structured Query Language is the programming language that we use to communicate with databases

Through this language we can store data in a database and then change it, delete it and retrieve it

It's a powerful tool that virtually every company in the world relies on in some way

What is SQL

SQL stands for Structured Query Language and can be pronounced as SQL or sequel

Structured English Query Language

Defined SQL is a query language used for accessing and modifying information in one or more data tables and rows of a database

SQL Database Design

IBM first developed SQL in 1970s

Also it is an ANSI ISO standard

It has become a Standard Universal Language used by most of the relational database management systems (RDBMS)

Some of the RDBMS systems are Oracle, Microsoft SQL server, Sybase etc

Most of these have provided their own implementation extensions thus enhancing their RDBMS system features and making it a powerful tool

These RDBMS systems all use the popular SQL

commands SELECT UPDATE DELETE INSERT WHERE in similar format SQL Database Table SQL database is constructed of a number of tables In a business SQL tables would be used to divide and simplify the different areas of the operation Table for Customers one for Vendors Employees and so on SQL Database Table Columns Each SQL table is made up of a number of columns referred to as fields and run along the top of the table Sql columns or fields have their content object data info defined into character types such as text date numeric integer length to name a few SQL Database Table Rows Each SQL table row referred to a record is located in the left column of the table Sql record row will contain a string of data containing data matching up to each column field across the top So in a Customer table each customer record would consist of one row with data for the customer ID number customer name address phone email and so on Click add to cart to learn how to take advantage of the powers of SQL and learn to wield them yourself
