Each title is full of fascinating facts and glorious full color photographs. The easy to read text is perfect for challenged readers while the high interest subject matter is sure to captivate all children. *Evolution's Witness* Ivan R. Schwab, Richard R. Dubielzig, Charles Schobert, 2012-01-05 The evolution of the eye spans 3.75 billion years from single cell organisms with eyespots to Metazoa with superb camera style eyes. At least ten different ocular models have evolved independently into myriad optical and physiological masterpieces. The story of the eye reveals evolution's greatest triumph and sweetest gift. This book describes its journey. Provided by publisher.

The Search for the Giant Squid Richard Ellis, 1999-10-01 The most mysterious and elusive of all sea creatures the giant squid at least sixty feet long and weighing nearly a ton is also one of the largest. Yet for all its magnificent size and threatening undersea presence *Architeuthis* has remained a mystery. Until now. In this marvelous and beautifully illustrated book marine biologist explorer and artist Richard Ellis presents all that is known about the giant squid. Delving into myth literature popular culture and science he brings readers face to face with this remarkable creature. He also provides a thorough compelling study of what is known and what is still to be discovered about this exotic animal that has never been studied alive. Interweaving his engrossing narrative with a wealth of fascinating illustrations and photographs Ellis gives us the first comprehensive history of the only living creature that can truly be called a sea monster. **Zoology** Kenneth Hyde, 2006-01-12 **Vision in Cephalopods** Frederike Diana Hanke, Daniel Colaco Osorio, 2018-03-13 Cephalopods usually have large and mobile eyes with which they constantly scan their environment. The eyes of cephalopods are single chamber eyes which show resemblance to vertebrate eyes. However there are marked differences such as the cephalopod eye having an everted retina instead of an inverted retina found in vertebrates. Their visual system allows the cephalopods depending on species to discriminate objects on the basis of their shapes or sizes, images from mirror images or to learn from the observation of others. The cephalopod visual system is also polarization sensitive and controls camouflage, an extraordinary ability almost exclusive to all cephalopods. They are capable of rapidly adapting their body coloration as well as altering their body shape to any background in almost any condition and even during self motion. Visual scene analysis ultimately leads to motor outputs that cause an appropriate change in skin coloration or texture by acting directly on chromatophores or papillae in the skin. Mirroring these numerous functions of the visual system, large parts of the cephalopod brain are devoted to the processing of visual information. This research topic focuses on current advances in the knowledge of cephalopod vision. It is designed to facilitate merging questions, approaches and data available through the work of different researchers working on different aspects of cephalopod vision. Thus the research topic creates mutual awareness and facilitates the growth of a field of research with a long tradition: cephalopod vision, visual perception and cognition as well as the

mechanisms of camouflage This research topic emerged from a workshop on Vision in cephalopods as part of the COST Action FA1301 Encyclopedia of Genetics Eric C.R. Reeve,2014-01-14 The Encyclopedia includes 125 entries beginning with the origins of genetics including historical background on the work of Gregor Mendel and Charles Darwin and progressing to the structure of DNA and modern theories such as selfish genes All branches of genetics are covered including the genetics of bacteria viruses insects animals and plants as well as humans Important topical issues such as the human genome project bioethics the law and genetics genetic disorders GM crops and the use of transgenic animals for food and pharmaceutical products are fully surveyed A section on techniques and biotechnology includes modern methods of analysis from DNA fingerprinting to the new science of bioinformatics The articles all written by specialists are largely non mathematical and progress from general concepts to deeper understanding Each essay is fully referenced with suggestions for further reading The text is supplemented by extensive illustrations tables and a color plate section The Encyclopedia of Genetics will be a valuable companion for all those working or studying in the various fields of genetical research and a fascinating reference for all readers with a basic background in biology Also includes color inserts France ,1918
