Southern Pacific Dieselization:

Southern Pacific Dieselization John Bonds Garmany, 1985 *Out of Steam* Jeffrey W. Schramm, 2010 *Out of Steam* examines how and why American railroads embraced the diesel locomotive and abandoned the steam locomotive that had been the heart and soul of the industry for over a hundred years. It looks at the development of the diesel locomotive, how and why individual railroads decided to adopt the diesel, and how the new form of motive power changed railroad operations, business practices, and communities. Railroads generally dieselized to control costs, especially labor costs, but different railroads adopted very different strategies for doing so. Some were prompted to try diesels by government legislation in the 1920s, while others were excited by the public relations and marketing benefits of streamlined diesels in the 1930s. Still others were attracted to the potential differences in performance that diesels offered in the 1940s. Despite complete dieselization by 1960, the industry declined for the next twenty years. American railroads underwent huge changes from 1920 to 1960 as the country faced boom, bust, war, and boom again. Dieselization was a major event in the history of a vital American industry. While others have looked at dieselization, no scholarly book to date has looked at the operational side of the equation and how individual railroads actually decided to acquire and use diesels. To make the analysis easier and more coherent, the book looks at various railroads following a geographic pattern: East, West, and South, that corresponded with the regulatory regions at the time. A range of various factors in the dieselization process are identified, ranging from the cost of fuel to government anti-smoke regulation to competition with other railroads to the character and experience of top management. Dieselization was not a foregone conclusion. Technological alternatives to dieselization, such as main line electrification and turbine locomotives, were viable. Yet they were not successful, due largely to non-technical factors. The social and cultural consequences of the change in motive power were far-reaching. Rail labor on trains and in shops suffered from the use of the diesel, although the locomotive fireman remained on the job for a generation after the last fires were extinguished. Book jacket **From Steam to Diesel** Albert J. Churella, 1998-08-03 This overview of the leading locomotive producers in the United States during the twentieth century shows how they responded to a radical technological change: the replacement of steam locomotives by diesels. The locomotive industry provides a valuable case study of business practices and dramatic shifts in innovation patterns since two companies, General Motors and General Electric, that had no traditional ties to locomotive production demolished established steam locomotive manufacturers. Albert Churella uses many previously untapped sources to illustrate how producers responded to technological change, particularly between the 1920s and the 1960s. Companies discussed include the American Locomotive Company (ALCo), the Baldwin Locomotive Works, the Lima Locomotive Works, Fairbanks Morse, the Electro-Motive Division of General Motors, and General Electric. A comparative work of business history and the history of technology, the book is not a complete history of any locomotive builder, nor does it explore the origins of the diesel engine in great detail. What it does and does superbly is to demonstrate how managers

addressed radical shifts in technology and production methods Churella reveals that managerial culture and corporate organizational routines more than technological competency per se allowed some companies to succeed yet constrained the actions of others He details the shift from small batch custom manufacturing techniques in the steam locomotive industry to mass production methods in the diesel locomotive industry He also explains that chance events and fortuitous technological linkages helped to shape competitive patterns in the locomotive industry **Out of Steam** Jeffrey W.
