Pressler,1996 **The Theory of Architecture** Paul-Alan Johnson,1994-04-18 The Theory of Architecture Concepts Themes Practices Paul Alan Johnson Although it has long been thought that theory directs architectural practice no one has explained precisely how the connection between theory and practice is supposed to work This guide asserts that architectural theory does not direct practice but is itself a form of reflective practice Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field He also reveals the connections between new and old ideas to enhance the reader s powers of critical evaluation Nearly 100 major concepts themes and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format Throughout Johnson attempts to reduce each architectural notion into its essential concept By doing so he makes theory accessible for everyday professional discussion Topics are arranged under ten headings identification definition power attitudes ethics order authority governance relationship and expression Areas covered under these headings include Utopic thought in theories of architecture Advocacy and citizen participation in architecture The basis of architectural quality and excellence The roles of the architect as artist poet scientist and technologist Ethical obligations of architecture Rationales for models and methods of design How authority is determined in architecture How architects structure their concepts Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed along with a summary history of the topic s use in architecture Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage Among the provocative issues discussed in terms of their relationship to architecture are chaos theory feminism service to the community and the use of metaphor Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text *First Course in the Theory of Equations* Leonard Eugene Dickson,1922

The Theory of Islamic Art Idham Mohammed Hanash,2017-01-01 Divine oneness as the principle of beauty is perhaps quintessentially Islamic artistic expression and experience and what it celebrates Why has Islamic art evolved as it has what forms does it take what is the logic underlying it What message is the Muslim artist attempting to convey what emotion is he seeking to evoke This work views Islamic art as a subject of archeological study and treats its evolution as part of the historical study of art in the broader sense At the same time it paves the way for an epistemological shift from viewing Islamic art as a material concept having to do with beautiful rarities and relics that have grown out of Islamic cultural and artistic creativity to a theoretical concept associated with a vision a principle a theory and a method This theoretical concept provides the intellectual and cultural foundation for a critical philosophical science of Islamic artistic beauty to which we

might refer as the science of Islamic art or the Islamic aesthetic that evaluates visual artistic creations in terms of both beauty and practical usefulness In the process the study also explores orientalist misconceptions challenging some of the premises with which it has approached Islamic art with judgement rooted in a cultural framework alien to the spiritual perspective of Islam
