Variational Problems In Geometry:

Translations of Mathematical Monographs Seiki Nishikawa, 1962 Lectures on Geometric Variational Problems

Seiki Nishikawa, Richard Schoen, 2012-12-06 In this volume are collected notes of lectures delivered at the First International Research Institute of the Mathematical Society of Japan This conference held at Tohoku University in July 1993 was devoted to geometry and global analysis Subsequent to the conference in answer to popular demand from the participants it was decided to publish the notes of the survey lectures Written by the lecturers themselves all experts in their respective fields these notes are here presented in a single volume It is hoped that they will provide a vivid account of the current research from the introductory level up to and including the most recent results and will indicate the direction to be taken by future research This compilation begins with Jean Pierre Bourguignon's notes entitled An Introduction to Geometric Variational Problems illustrating the general framework of the field with many examples and providing the reader with a broad view of the current research Following this Kenji Fukaya's notes on Geometry of Gauge Fields are concerned with gauge theory and its applications to low dimensional topology without delving too deeply into technical detail Special emphasis is placed on explaining the ideas of infinite dimensional geometry that in the literature are often hidden behind rigorous formulations or technical arguments

Variational Problems in Riemannian Geometry Paul Baird, Ahmad El Soufi, Ali Fardoun, Rachid Regbaoui, 2004-03-26 This book collects invited contributions by specialists in the domain of elliptic partial differential equations and geometric flows The articles provide a balance between introductory surveys and the most recent research with a unique perspective on singular phenomena Notions such as scans and the study of the evolution by curvature of networks of curves are completely new and lead the reader to the frontiers of the domain The intended readership are postgraduate students and researchers in the fields of elliptic and parabolic partial differential equations that arise from variational problems as well as researchers in related fields such as particle physics and optimization

Variational Problems in Differential Geometry Roger Bielawski, Kevin Houston, Martin Speight, 2011-10-20 The field of geometric variational problems is fast moving and influential These problems interact with many other areas of mathematics and have strong relevance to the study of integrable systems mathematical physics and PDEs The workshop Variational Problems in Differential Geometry held in 2009 at the University of Leeds brought together internationally respected researchers from many different areas of the field Topics discussed included recent developments in harmonic maps and morphisms minimal and CMC surfaces extremal Kähler metrics the Yamabe functional Hamiltonian variational problems and topics related to gauge theory and to the Ricci flow These articles reflect the whole spectrum of the subject and cover not only current results but also the varied methods and techniques used in attacking variational problems With a mix of original and expository papers this volume forms a valuable reference for more experienced researchers and an ideal introduction for graduate students and postdoctoral researchers

The Geometry of Ordinary Variational Equations Olga Krupkova, 2006-11-14 The book provides a comprehensive theory of ODE which come as Euler Lagrange equations from generally higher order Lagrangians Emphasis is laid on applying methods from differential geometry fibered manifolds and their jet prolongations and global analysis distributions and exterior differential systems Lagrangian and Hamiltonian dynamics Hamilton Jacobi theory etc for any Lagrangian system of any order are presented The key idea to build up these theories as related with the class of equivalent Lagrangians distinguishes this book from other texts on higher order mechanics The reader should be familiar with elements of differential geometry global analysis and the calculus of variations

Some Variational Problems in Geometry José Fernando Escobar, 2000 **On Variational Problems in Geometry and General Relativity** Pengzi Miao, 2003 *Two-Dimensional Geometric Variational Problems* Jürgen Jost, 1991-03-29 This monograph treats variational problems for mappings from a surface equipped with a conformal structure into Euclidean space or a Riemannian manifold Presents a general theory of such variational problems proving existence and regularity theorems with particular conceptual emphasis on the geometric aspects of the theory and thorough investigation of the connections with complex analysis Among the topics covered are Plateau's problem the regularity theory of solutions a variational approach for obtaining various conformal representation theorems a general existence theorem for harmonic mappings and a new approach to Teichmüller theory via harmonic maps

Variational Problems in Topology A.T. Fomenko, 2019-06-21 Many of the modern variational problems in topology arise in different but overlapping fields of scientific study mechanics physics and mathematics In this work Professor Fomenko offers a concise and clean explanation of some of these problems both solved and unsolved using current methods and analytical topology The author's skillful exposition gives an unusual motivation to the theory expounded and his work is recommended reading for specialists and nonspecialists alike involved in the fields of physics and mathematics at both undergraduate and graduate levels

David Meier,2013 *Introduction to Global Variational Geometry* Demeter Krupka,2000-04-01 This book provides a comprehensive introduction to modern global variational theory on fibred spaces It is based on differentiation and integration theory of differential forms on smooth manifolds and on the concepts of global analysis and geometry such as jet prolongations of manifolds mappings and Lie groups The book will be invaluable for researchers and PhD students in differential geometry global analysis differential equations on manifolds and mathematical physics and for the readers who wish to undertake further rigorous study in this broad interdisciplinary field Featured topics Analysis on manifolds Differential forms on jet spaces Global variational functionals Euler Lagrange mapping Helmholtz form and the inverse problem Symmetries and the Noether s theory of conservation laws Regularity and the Hamilton theory Variational sequences Differential invariants and natural variational principles First book on the geometric foundations of Lagrange structures New ideas on global variational functionals Complete proofs of all theorems Exact treatment of variational principles in field theory inc general relativity Basic structures and tools global analysis smooth manifolds fibred spaces

Variational Methods BERESTYCKI,2012-12-06 In the framework of the Annee non lineaire the special nonlinear year sponsored by the C N R S the French National Center for Scientific Research a meeting was held in Paris in June 1988 It took place in the Conference Hall of the Ministere de la Recherche and had as an organizing theme the topic of Variational Problems Nonlinear analysis has been one of the leading themes in mathematical research for the past decade The use of direct variational methods has been particularly successful in understanding problems arising from physics and geometry The growth of nonlinear analysis is largely due to the wealth of applications from various domains of sciences and industrial applications Most of the papers gathered in this volume have their origin in applications from mechanics the study of Hamiltonian systems from physics from the recent mathematical theory of liquid crystals from geometry relativity etc Clearly no single volume could pretend to cover the whole scope of nonlinear variational problems We have chosen to concentrate on three main aspects of these problems organizing them roughly around the following topics 1 Variational methods in partial differential equations in mathematical physics 2 Variational problems in geometry 3 Hamiltonian systems and related topics
