Variational Methods In Nonlinear Elasticity:

Variational Methods in Nonlinear Elasticity Pablo Pedregal, 2000-01-01 This book covers the main vector variational methods developed to solve nonlinear elasticity problems Presenting a general framework with a tight focus the author provides a comprehensive exposition of a technically difficult yet rapidly developing area of modern applied mathematics The book includes the classical existence theory as well as a brief incursion into problems where nonexistence is fundamental It also provides self contained concise accounts of quasi convexity polyconvexity and rank one convexity which are used in nonlinear elasticity

Variational Methods for Fundamental Nonlinear Problems of Partial and Ordinary

Differential Equations M. S. Berger, BELFER GRADUATE SCHOOL OF SCIENCE NEW YORK., 1974 Substantial results documented in ten research papers were obtained under the grant The principal achievements center about the discovery of new methods in the calculus of variations and the application of these methods to specific problems in nonlinear elliptic partial differential equations differential geometry nonlinear elasticity and fluid mechanics Significant applications were the following a complete study of large vortex rings in an ideal fluid a vigorous variational method for the study of large deformation equilibrium states in nonlinear elasticity under general bending and buckling body forces new results in bifurcation theory using the Morse type numbers a new result on the simplest metrics on complex manifolds new solvability criteria for nonlinear gradient operator equations and an entirely new method for the study of nonlinear operator equations and boundary value problems for partial differential equations with far reaching consequences both for numerical analysis and theoretical research Author

Handbook of Variational Methods for Nonlinear Geometric Data Philipp

Grohs, Martin Holler, Andreas Weinmann, 2020-04-03 This book covers different current research directions in the context of variational methods for non linear geometric data Each chapter is authored by leading experts in the respective discipline and provides an introduction an overview and a description of the current state of the art Non linear geometric data arises in various applications in science and engineering Examples of nonlinear data spaces are diverse and include for instance nonlinear spaces of matrices spaces of curves shapes as well as manifolds of probability measures Applications can be found in biology medicine product engineering geography and computer vision for instance Variational methods on the other hand have evolved to being amongst the most powerful tools for applied mathematics They involve techniques from various branches of mathematics such as statistics modeling optimization numerical mathematics and analysis The vast majority of research on variational methods however is focused on data in linear spaces Variational methods for non linear data is currently an emerging research topic As a result and since such methods involve various branches of mathematics there is a plethora of different recent approaches dealing with different aspects of variational methods for nonlinear geometric data Research results are rather scattered and appear in journals of different mathematical communities The main purpose of the book is to account for that by providing for the first time a comprehensive collection of different research directions and

existing approaches in this context It is organized in a way that leading researchers from the different fields provide an introductory overview of recent research directions in their respective discipline As such the book is a unique reference work for both newcomers in the field of variational methods for non linear geometric data as well as for established experts that aim at to exploit new research directions or collaborations Chapter 9 of this book is available open access under a CC BY 4 0 license at link springer com

Variational and PDE Methods in Nonlinear Science Fabrice Bethuel, Duvan Henao, Angkana Rüland, 2025-07-01 This book presents three short courses on topics at the intersection of Calculus of Variations PDEs and Material Science based on lectures given at the CIME summer school Variational and PDE Methods in Nonlinear Science held in Cetraro Italy July 10 14 2023 Fabrice Bethuel discusses asymptotics for Allen Cahn systems providing an overview of classical methods and tools for the scalar case and further results for the two dimensional vectorial case An alternate monotonicity formula is described and the still open parabolic vectorial case is considered Angkana Rüland considers the modelling and analysis of microstructures in shape memory alloys including material on quasiconvexity differential inclusions rigidity of the two well problem under BV regularity assumptions and recent results on the quantitative dichotomy between rigidity and flexibility Duvan Henao focuses on existence theory in nonlinear elasticity where a central role is played by the Jacobian determinant The methods developed have implications for the analysis of magnetoelasticity and nematic elastomers The volume is aimed at graduate students and researchers interested in the applications of PDEs and the calculus of variations to the theory of phase transitions fluid dynamics materials science and elasticity theory
