Nutrition Information Documents Series, Evaluation of the project "Strengthening Food Security Information and Early Warning System" Food and Agriculture Organization of the United Nations, 2022-08-18
The project Strengthening Food Security Information and Early Warning System was a two-year project from 1 February 2019 to 31 January 2021, valued at EUR 5.9 million, funded by the European Union to scale up the geographic coverage of Yemen's Food Security Information System. The overall objective of the project was to increase systemic resilience to food crisis and climate change as well as improve food security and nutrition governance for decision making at the national and governorate levels. The project is the latest phase in a series of EU-funded investments in food security information systems in Yemen, with this project aiming to expand the geographic and technical coverage of previous phases. With these investments expected to continue in the future, the evaluation has aimed to provide accountability to project partners as well as the provision of evidence-based analyses and usable recommendations that feed into programming policy and decision-making processes. Personalized Nutrition in Chronic Kidney Disease, 2nd edition Lara Caldiroli, Alice Sabatino, Andriana De Mauri, 2024-11-08
Nutritional status is a crucial prognostic factor in chronic kidney disease (CKD) patients. The nutritional approach depends on the stage of renal disease, patients' comorbidities, protein catabolism, and the presence of malnutrition. The gradual and progressive worsening of kidney function, characterized by a reduced glomerular filtration rate, carries many challenges for both young and elderly patients. Dietetic nutritional therapy (DTN) has an important role in the prevention and in the progression of Chronic Kidney Disease. An appropriate nutritional approach contributes to the prevention and control of signs, symptoms, and metabolic complications of CKD, such as hyperkalemia, hyperphosphatemia, and metabolic acidosis. It also helps avoid malnutrition and protein energy wasting (PEW). Several dietary approaches have been proposed, but the most successful nutritional regimen is the one tailored to patients' needs. This Research Topic is open for original articles, narrative review, systematic review, and meta-analysis focusing on personalized nutrition in patients with CKD on both conservative and replacement treatments. Suggested topics relating to renal nutrition and chronic kidney disease may include

but are not limited to Use of amino acids or keto analogues supplementation in CKD patients in conservative therapy or in dialysis Strategies to improve dietary adherence Psychological aspects of nutritional adherence Nutritional indications in inflamed CKD patients Interaction between diet microbiota and comorbidities Personalized nutritional counseling Strategies to avoid malnutrition and PEW Essentials of Nutrition and Diet Therapy Sue Rodwell Williams,Eleanor D.
